## How to identify rolex serial number

By Christina Shaffer | Justin Sullivan/Getty Images News/Getty Images iPods come in a variety of generations and models, including the nano, Classic and Touch. Depending on your model you may be able to record video, play games or watch television. If you're unsure of your device's model, you can determine which iPod you have by using your serial number. After determining your model, you can find out which features and capabilities your iPod has. Go to Apple's official website (see Resource section) and click the Support tab. Click the Online Service Assistant link, which is located in the Support Services menu on the right side of the screen. The Service and Repair page will open. Find your iPod's serial number. This is engraved somewhere on the back of your iPod, either on the body of the device or on the clip. You can also find it in your iPod's About screen by clicking Settings and selecting About (or General followed by About on an iPod Touch). Enter your iPod's serial number and click the "Continue" button. Your iPod model and generation will be displayed at the top of the screen. A serial number is a unique, identifying number or group of numbers and letters assigned to an individual piece of hardware or software. Other things have serial numbers as well, though, including banknotes and other similar documents. The idea behind serial numbers is to identify a specific item, much like how a fingerprint identifies a specific person. Instead of some names or numbers that specify a whole range of products, a serial number is intended to provide a unique number to one device at a time. Boris SV / Getty Images Hardware serial numbers are embedded in the device, while software or virtual serial numbers are sometimes applied to the user who will be using the software. In other words, a serial number used for software programs are tied to the purchaser, not that specific copy of the program. The term serial number is often shortened to just S/N or SN, especially when the word precedes an actual serial number on something. Serial numbers are also sometimes, but not often, referred to as serial codes. It's important to distinguish serial numbers from other identifying codes or numbers. In short, serial numbers are unique. For example, a model number for a router might be EA2700 but that's true for every single Linksys EA2700 router; the model numbers are identical while each serial number is unique to each particular component. As an example, if Linksys sold 100 EA2700 routers in one day from their website, every one of those devices would have "EA2700" somewhere on them and they would look identical to the naked eye. However, each device, when first built, had serial numbers printed on most of the components that aren't the same as the others bought that day (or any day). UPC Codes are common as well but are actually not unique like serial numbers. UPC Codes are different than serial numbers because UPC Codes aren't unique to each individual piece of hardware or software, as serial numbers are. The ISSN used for magazines and ISBN for books is different as well because they're used for whole issues or periodicals and aren't unique for every instance of the copy. You've probably seen serial numbers many times before. Nearly every piece of the computer has a serial number including your monitor, keyboard, mouse and sometimes even your entire computer system as a whole. Internal computer components like hard drives, optical drives, and motherboards also feature serial numbers. Serial numbers are used by hardware manufacturers to track individual items, usually for quality control. For example, if a piece of hardware is recalled for some reason, customers are usually made aware of which particular devices need service by being provided a range of serial numbers. Serial numbers are also used in non-tech environments like when keeping an inventory of tools borrowed in a lab or shop floor. It's easy to identify which devices need to be returned or which ones have been misplaced because each of them can be identified by their unique serial number. Serial numbers for software programs are usually used to help ensure that the program's installation is only performed one time and only on the purchaser's computer. Once the serial number is used and registered with the manufacturer, any future attempt to use that same serial number can raise a red flag since no two serial numbers (from the same software) are alike. Thanks for letting us know! Tell us why! How to Find the Serial Number Gucci serial numbers are found on many of the company's products, including their handbags, wallets, and shoes. The placement depends on the product. For handbags, you should find the serial number on a square or a rectangular leather patch that's sewn to the inside of the bag. The numbers are located at the top of the tag, which is not sewn to the purse at all sides. For wallets, look in the interior of the wallet under one of the credit card slips. These serial numbers are often tricky to locate because they blend so well into the wallet's material. Most authentic Gucci watches have the serial number on the back of the watch. Your Guide to Reading the Serial Number Your Gucci purse, wallet, or watch should have a serial number. If you don't see one at all, this is often a sign that the product is fake (at least for more modern Gucci products). Unfortunately, the presence of a serial number isn't always an indicator that the product is real, as it's possible to put fake serial numbers on counterfeit products. Once you've spotted the serial number, it needs a thorough examination to determine if it's a real serial number. The serial numbers should have a classic, non-modern font with an appearance that appears uniform throughout. There also shouldn't be any letters in the serial number. Modern products split the serial number over two rows. Numbers range between 10 and 13 digits. How to Use an Outside Source to Confirm the Serial Number The greatest advantage of finding a serial number in your Gucci product is that you can use the number to check that the product is real. There are a few ways to confirm the authenticity of the product using a serial number. One option is to contact Gucci directly to verify that the serial number is authentic. Note that this alternative doesn't verify the authenticity of the bag, but it confirms that the serial number is valid. Theoretically, it's possible to put a real serial number on a counterfeit product. You can also use an online service that authenticates luxury items using the serial number and several photographs of the item. Another alternative is to take the item in-person to an individual that authenticates luxury products. Exceptions for Vintage Products The Gucci brand was established in 1921. Vintage products may have serial numbers that look nothing like the serial numbers on more modern products. Some old products may lack serial numbers entirely. Others may have a two-digit serial number or incorporate dashes and periods into the serial number. Other Tips for Verifying the Authenticity of Gucci Products You need to look at the Gucci product as a whole to determine absolute authenticity. Gucci products are well-constructed and boast even stitching and workmanship. Everything on the product should feel sturdy and high quality. The G for the Gucci logo should have a rounded shape similar to an O or a C. A "made in Italy" stamp should appear somewhere on the product. If this stamp reads any other country, the product isn't authentic. A serial number is a unique numeric sequence that helps keep track of items. All computers come with serial numbers. These serial numbers may become necessary when calling technical support to get help with your computer. Serial numbers are visually displayed on desktop and laptops with a sticker. The sticker can usually be easily located in the rear or underneath the device. Some computer manufacturers, like Gateway, can also link into your computer and find your serial number for you. Power your computer off, so you can have access to the rear or underside of the computer. Pull your hard drive case out, on a desktop, so you can locate the serial number on its side or on its back. If you have a laptop, turn it over. Locate any stickers on your computer. Many computers will have more than one sticker containing a series of numbers or other information. Find the sticker that says Serial Number or S/N. The serial number will be following those words or letters. Go to Gateway's website at gateway.com if you have a Gateway computer, and they will find your serial number for you. A serial number is usually a unique number given to each produced copy of a mass-produced product, such as an appliance, a computer, a phone or even a piece of software. Image Credit: Watchara Piriyaattanapun/Moment/GettyImages A serial number is usually a unique number given to each produced copy of a mass-produced product, such as an appliance, a computer, a phone or even a piece of software. It's often used to access customer support and warranty information for your product and to validate that you own a legitimate edition of the product. Find the serial number on the product itself or in your receipt, and do a serial number or S/N number lookup on the manufacturer's site to see more information about your product. Where you can find the serial number on a product depends on what kind of product it is. In many cases, the serial number will be physically printed on the surface of the product. Search the item in question for a serial number, remembering to look inside the product if it has any openings, including battery compartments. If it's an electrical device, you may want to unplug it before you begin searching it for a serial number for safety's sake. Software products, computers and cellphones can also have serial numbers and often do. If your device doesn't have the serial number printed on it, you may be able to access it digitally. Search the documentation for your product online or in materials that came with it to figure out how to access the serial number. Contact the manufacturer for help if you aren't sure how to access the serial number. If a serial number search of the product itself isn't fruitful, or you have a digital product that you can't turn on because it isn't working, you might still have a way to access the serial number. Check your receipt for the product, assuming you still have it, to see if the serial number is listed. If you have had service done on the product in the past, the serial number might also be on your receipt from the repair. If you bought the product online, you may be able to find the serial number on the website where you bought the product. If it's a product that you registered to access certain features or for warranty purposes, you may also be able to find the serial number on the manufacturer's website. You can also try contacting the store or website where you bought the product to see if the serial number is available. Once you find the serial number, you may want to record it in a safe place. You can maintain a spreadsheet on a cloud-based system like Microsoft Office or Google Drive to keep serial numbers of various items you own. That can be helpful if you ever need warranty repair for any of the products on the list or if you need to file an insurance claim if a product is in some way damaged, lost or stolen. Once you have your product's serial number in hand, you can often use it to see if the product is covered by a warranty or extended service plan, if the product has been recalled and to see other information about the product. If it's a digital product or a computer, smart TV or something similar, you may also be able to see if there are any software updates available for the product. Visit the manufacturer's website and see if there is a way to do an S/N number check on the website and see what information is available. If you don't see that information online, give the company a call and see if someone on the tech support or customer service line can look up your product by serial number.
