In addition to other things, the Android 12 has brought many aesthetic changes and improved confidentiality options. However, in terms of features, it is not much different than we have in Android 11. A feature that many users do not consider and worried about chat balloons. For some Android 12 users, chat balloons do not work in some applications that support this feature. We hope that the listed steps will help you solve this problem as soon as possible. . If you want chat balloons to work on your Android, please enable the following settings in Settings> Notifications. .one. Make sure that balloons are activated for all events and all messaging applications do not currently support chat balloons. Currently only Telegram supports chat balloons as well as Facebook Messenger and Google (Samsung) messages. WhatsApp should also support them, but for some reason it does not yet support. As our reader points out, the chat balloons do not work while the application is locked, so you need to unlock them by methods such as application lock or safe folder to access them. Make sure you disable these applications or exclude applications using chat balloons. What you need to do is to make sure that bubbles are activated in system preferences. You can activate the bubbles here: Open Settings. Coose applications and notifications. -Choose the regular. Select Bubbles. Change the option to allow applications to display the balloons. 2. Activate the application -specific chat balloons. Then, in a specific application that supports the feature, you can be sure that the chat balloons feature is enabled. Supported applications will probably not be activated by default. Therefore, it is worth controlling the With with Bubbles settings. Open an application from the list and select messages. If they still do not work after applying the application cache and data chat balloons, we recommend that you clean the application cache and data. After upgrading to Android 12, we suspect that local data is broken. After deleting local dataAndroid 12 brought many aesthetic changes and better protection of personal data. As for the functions, it is not very different from what we already received in Android 11. While many users were not taken into account, many were worried about chatting with the bubbles. For some Android 12 users, chat bubbles do not work for some selected applications that support this function. We hope that the steps we mentioned for you will help you solve this problem as soon as possible. . If you want chat bubbles to work on your Android, you should activate the following notifications in the settings. .one. Make sure that bubbles are active for all events, and all applications for sending messages are currently supporting chat bubbles. Currently, messages with Facebook Messenger and Google (Samsung) only support chat bubbles functionally. WhatsApp should support them, but it doesn't work for some reason. As our gambling player observes, summer bubbles do not work if the application is prevented or a safe folder is blocked, they should unlock them. Make sure you disable or exclude applications using summer bubbles. What you need to do is to make sure that bubbles are allowed in system preferences. Here you can activate the bubbles: Open the settings. Koose Apps & Notification.seletct -notification.coo Bubbles.Toggle has been enabled in applications to display bubbles. 2. Allow summer bubbles for a particular application. You can also be sure that the summer bubble function is effective for a particular application that supports this function. Supported applications will probably not be activated by default. Therefore, it is worth controlling working with bubbles. Open the application from the list and select notifications. The elimination of application cache and chat data bubbles is not yet working, even if you have passed the first two steps, we recommend that you delete cache and application data. After updating to Android 12, we suspect the damage to local data. Local eliminationYou should take care of this issue. Follow these instructions to clear the cache and data of the affected app: Scroll to Settings > Apps & Notifications > All Apps. Log in to the application again 4. Update the application Finally, if none of the previous steps worked for you, be sure to update the application. You can also join a beta program (like WhatsApp) as soon as possible or get the latest beta version of apkmirror apk. Just go to the Play Store and find the app that doesn't work with chat bubbles on Android 12. Make sure it's up to date, sign up for the beta and sign in. After updating, try chat bubbles. And on that note, we can call it Wrap. Thanks for reading and don't forget to let us know your thoughts in the comments section below or on Facebook and Twitter. We look forward to hearing from you. Note. This article was originally published in October 2020. Make sure we check it for freshness and accuracy. Google introduced the new Bubbles API in the second beta of Android 10, and this API was initially offered to developers. Google asked them to test the API in their own apps so that when the feature is finally ready, supported apps are ready. Introduced as part of the Android 11 Developer Review 1 preview. Facebook Messenger was one of the first apps to officially support the Bubbles API, but it looks like the company may roll it out gradually. Facebook Messenger is one of the few apps that use the Bubbles API outside of Google apps like Google News. /R/Android users have seen that Android 11 bubbles are no longer supported in the latest versions of the app and have been replaced by Facebook Messenger heads. I can also confirm that the bubbles from my friend's Samsung Galaxy S20 Fe are gone and replaced with chat heads. Chat titles are what Facebook Messenger used to record conversations and have been around long before the Bubbles API was introduced. The 2 images from my test seem to be a server side switch. I installed the latest version of the app, version 331.0.0.28, and I still had blisters. My friend on 328.2.0.18.118 now has chat instead of bubbles.Using the previous version of the application. Chat Facebook Messenger Chat Cat may currently be undergoing Facebook A/B testing to understand if there are preferences, or it may indicate that the company is gradually trying to exclude the use of bubbles in two cases, it does not seem that all Facebook Messenger users Discuss but which made an important part. If Facebook is completely bubble testing with Android 11, it will be removing one of the few major apps that actually use it. Facebook Messenger was the first messaging app to introduce and spread chat heads (chat bubble) on Android, but with Android 10 some other apps got this feature. Interestingly, this change seems to have caused problems at the head of Facebook's Messenger cat, mostly reliable. Based on the reports, some users say that the messaging bubble is not showing. If you also don't see the incoming messenger bubble, check the instructions below. This is generally because the chat heads are disconnected in the messengers or in the notification settings. In addition, it may be a bug in the current version of Facebook messenger content. If you don't get the Facebook Messenger chat boss with incoming messages, remember: Activate the messenger bubble in the Messenger app. Reinstall the messenger or use the APK to get the latest alpha or previous versions. Check the settings and permissions in the app. The first thing you need to do is control the application settings. It's possible that all, some or no notification to appear as a bubble. This option must be activated by default, but it must be checked to ensure this is the case. Also, you should probably check if Facebook Messenger has permission to display content over other apps in the system settings. Here's what you need to do: Open Facebook Messenger.Tap on your profile picture in the upper left corner. Cats' clothes are lit up and notifications and sounds are open. Select notification categories. Tap shows as bubbles and make sure you select everything. The exact steps may vary in different Android skins, but you can find bubbles in the notification settings. In addition, you should view settings>> Full Application> Messenger. When there, check that the author appears in the foreground and make sure that Messenger has permission to draw other applications. For more information, see our article on Android authorization management. 2. Facebook Messenger will be deleted local data from the alternative solution, delete local data from Facebook Messenger and thus reset the application. Some users report that they have solved the problem, while others are still stuck in the problem. Since Facebook Messenger is based on clouds, you will not lose chat data by deleting your local data. If you delete some photos or videos you record from the chat, you can always restore them to chat options> Local data Facebook Messenger: Open the Settings section. Select the program. If necessary, expand all applications. Touch the storage item. Cancellation and verification. Open Facebook Messenger, access your Facebook identity information and check if the problem still exists. 3. You can reinstall the application as an alternative to Reinstalla Facebook Messenger. This is not especially different from the previous solution, but you will receive the latest version of Facebook Messenger as an additional bonus in the Play Store. Play Store: How to reinstall Facebook Messenger by opening the Play Store is described below. Call Facebook Messenger and expand your application. The phone was the phone and opened the game store again. Messenger and install. Accept it again and check that the application is running. 4. Upload a new or previous version of Kickkkfne, when APK is doing it, we recommend that you replace the current version of Messenger with the previous version or alpha or beta. Some users report that the heads have started to work as before after downloading the latest version. Remember that alpha or beta versions are unstable and some other features may not work. As for APK files, you do not need to worry about them because installing APK files on the Android operating system is completely safe (unless you download it from a reliable source). Be sure to remove the application from the Play Store before installing it. And in this note we can conclude this article. Thank you for reading and feel free to share your thoughts, questions or suggestions in the comments below. We can't wait to get news from you. Editor's note: This article was initially published in 2022. March. We have definitely updated to make it more fresh and more accurate. With the Android 11 operating system, Google has now brought full support to bubble chat expressions. If you have a working deviceIn the public beta version, you can learn how to activate and use Android 11 chat bubbles. However, the option was hidden in the developer's options in a stable publication. Although not mandatory for Android 10, it is now activated by Android 11 by default. Chat bubbles are similar to what Facebook offers with your Messenger program for years. Instead of a typical messaging, the conversation screen appears as floating incarnations. You can pull them out or touch them to open the chat screen. The latest Android focuses on how they interact with people, ie their conversations. Make sure you never miss any conversation among other news. Speech bubble reports on Android 11 added Google to new immersion to activate Android 11 bubbles. You can access your phone as follows. 2] Choose a program that supports a feature such as Messenger. Below is a small bladder symbol that can be used to replace floating messages. From the first public beta, Facebook Messenger features. Based on messages, Google will soon provide the available Google Message Program. Once this is important, you can activate the bubble conversation in the news message settings. Arrival at the endbubble chat feature is based on the new Google Bubbles API. When the program developers start implementing, we will see other programs that support it, including WhatsApp and Telegram in the near future. Whatever your thoughts? Send us a message in the comments below. Update GTU tips and tricks for Android 11.
