action convention. c.InjectStylesheet("/redoc/custom.css"); } It is also possible to modify the theme by invoking the AddSecurityDefinition method, providing a name and an instance of OpenApiSecurityScheme. Inject Custom CSS To tweak the look and feel, you can inject additional CSS stylesheets by adding them to your wwwroot folder and specifying the relative paths in the middleware options: app.UseRelDoc(c => { ... [output] is the relative path where the Swagger JSON will be output to [startupassembly] is the relative path to your application's startup assembly [swaggerdoc] is the name of the swagger document you want to retrieve, as configured in your startup class Using the tool with the .NET Core 3.0 SDK or later In your project root, create a tool manifest file: Install as a local tool dotnet tool install --version 6.3.1 Swashbuckle.AspNetCore.Cli Verify that the tool was correctly dotnet swagger tofile --help Generate a Swagger / OpenAPI document from your application's startup assembly dotnet swagger tofile --output [output] [startupassembly] [swaggerdoc] Where ... That is, you can create filters with constructor parameters and if the parameter types are registered with the DI framework, they'll be automatically injected when the filters are instantiated Schema Filters Swashbuckle generates a Swagger-flavored JSONSchema for every parameter, response and property type that's exposed by your controller actions. It interacts with authorization and/or token endpoints, as specified in the Swagger JSON, to obtain access tokens for subsequent API calls. } NOTE: This will add the above description specifically to the tag named "Products". Inject Custom CSS To tweak the look and feel, you can inject additional CSS stylesheets by adding them to your wwwroot folder and specifying the relative paths in the middleware options: app.UseSwaggerUI(c => { ... Enabling Inheritance By default, Swashbuckle flattens inheritance hierarchies. Once generated, individual metadata objects are passed into the pipeline where they can be modified further. See Enabling OAuth2.0 Flows for more details. For example, you might have a class with multiple properties that you want to represent in JSON as a comma-separated string. Configure Swashbuckle to incorporate the XML comments on file into the generated Swagger JSON: services.AddSwaggerGen(c => { c.SwaggerDoc("v1", new OpenApiInfo { Title = "My API - V1", Version = "v1" } ); var filePath = Path.Combine(System.AppContext.BaseDirectory, "MyApi.xml"); c.IncludeXmlComments(filePath); } Annotate your actions with summary, remarks, param and response tags: /// /// Retrieves a specific product by unique id /// /// Awesomeness! /// The product id /// Product /// Product not found /// åoops! I can't look for your product at this time [httpget (" {id} ")] [producerisontype (Typeof (product), 200)] [producerisontype (404)] [producesSponSettype (500)] Getbyid Pätbyid Product Getbyid (INT GETBYID (INT GETBYID ID) You can also write down types with summary and example labels: Pãblica product {//// /// the product name /// // }
