My stomach hurts like hell

My stomach hurts like hell after eating. What does it mean when your stomach hurts badly. Why is my stomach hurting badly. Why is my stomach in agony. Why does my stomach hurt like hell.

Often the disease looks out of nowhere: for example, you wake up at night with intense stomach pain. Or you stumbling while you carry something heavy and you can not go through the day without pain. The pain of stomach is an extremely common problem, but most of the time it is easy to deal with. Your doctor can recommend a product to relieve pain. The most common cause is gastroenteritis - a viral infection of the stomach, which its immunological system can struggle on its own, in addition to taking proper medicine. Severe stomach pain that makes you feel very sick (also can cause fever or chills) may be due to a better condition or food intoxication. If you have any of these symptoms, you should visit your doctor to receive treatment. If you have agonizing pain in any belly area, look for immediate medical help. It can be a sign of a serious disease, for example, appendicitis, which will only be worse without treatment. Crypt abdominal pain can be anything from an irritating distract to a debilitating issue. But putting your finger because your stupid always can be challenging. The thing that makes diagnosing the cause of abdominal pain so complicated is, well, babies anatomy. Virtually any agile system in the body can play a part in making you feel sick, which means, if something that really bothered you, you should make a consultation with a doctor. But before your consultation, it is a good idea to educate yourself about your symptoms. Dink on the diagram of the human body. His digestive system is crushed in his abdomen with his kidneys, a border, a vesicle border, Baço, Aponendice, Panities and, if you are a woman, her reproductive agriculture. And inflammation anywhere can lead to inflammation everywhere. Some abdominal pain is even caused by problems in other parts of the body - such as thyroid or the pituitary glamar. You would think that the pain after eating would suggest a problem with your digestive system, but even if you can not be a smoking weapon, diagnostically speaking. Eating can put the pressure on olegs out of your digestive system - not to mention that your kidneys and a beans touch integral papers in the processing of food and beverages that you consume every day. And then there is an important role of stress and anxiety. So, what are some suggestions you can lead to the doctor to identify the source of your abdominal pain? Let's check some of the most common clues.1. Food Allergies and Intolerantias If you are experiencing specifically upset digestive as a constipation, diarrhea or unusual quantities after eating the same type of food and food time, you can have an intolerã e to the own food due to the chemistry within its intestine. People who suffer from cell disease are not equipped with the enzyme needed to break the glan, the protein found in wheat and other grain. People who are intolerant of lactose are disabled in the enzyme needed to break lactose. If you think you may be suffering from one of these conditions, you think your doctor to confirm whether or not to reduce the offensive protein from your diet. Endometriosisetoriasis is a condition that, as you can already know, affects only women. The problem arises when the endomer, which is what you spilled every time you menstruate, grows out of the custody - usually outside your ovaries and intestines. The problem is that the endomer so much inside and out of the building normally behaves during its monthly cycle, but only the endomer in the surge can get out of the body. This, as you can imagine, causes extreme abdominal pain and can lead to fertility problems and higher rates of ovary on the line. Its doctor can diagnose endometriosis with legal and / or ultrasound examination, and treatments are available, which vary based on the severity of the case.3. Irritable intestine sound is also especially in women. Symptoms Symptoms Substantial believers with intestinal movements, they are frequent or not frequent enough, mucous in feces and gains and swelling. Treatment for IBS is mostly dietary, with medical advice people with this condition to avoid coffee, alcohol, foods that promote swelling as beans and brocalis, and to increase intake Fiber. The exercise is also recommended to alleviate the symptoms of IBS.4. Ansiethystress triggers the struggle or flight system of her body, which in turn sends adrenaline flooding her veins. Adrenaline accelerates the old digestive tract in the same way as a cup of coffee would do with empty stomach, which can cause discomfort and overheart. If you are feeling a lot of stress and anxiety, this could certainly be to blame for your sore stomach.5. The disease of gastroesophageal reflux (GERD) Some people suffer from a condition that causes excess agriculture in the stomach to work against the flow of gravity and carry a esAgigago. This can cause inflammation that leads to the type of pain we associate with heartburn, coughing and asthma and even excess mucosal in breasts. GERD should be treated by changes in the diet - avoiding things like this delicious spaghetti marinara place - and super-balcony medications that limit the agriculture in the stomach. Ask your doctor what the treatments are right for you. Problems of thyroid thyroid, which lives all the way in your neck, regulates the functions of the body in several agriculum systems. Also can cause your digestive system to get all kinds of confusion. A hyperactive thygoing can cause a frequent, loose, anxiety and abnormal weight loss. A sub-active thygoing can cause lethargy, constipation and inexplicable weight gain. If your mood, weight and digestive regularity have been thrown out of your normal routines, ask your doctor if you could be experiencing a problem with your thyroid.Images: Pexels (5); Pixabay (3) Symptoms of stomach pain after the meals most of the time, the causes of the digestive problem after eating are not much to worry. But if the pain is very strong, sustenly or lasting, it should be examined by a fastest possible medical. Some common alert signs of stomach pain after a meal is: swelling just because others can tolerate certain types of food well, it does not mean that you too. Eating very fast, too much, or very high foods in fat, all can trigger gases and problems of swelling in the stomach. Try to register the foods you eat and accompany how your body responds to different things. Estipação's pains after eating, along with the constipation, can pass from various lifestyles and food factors. For example, abdominal muscles and diaphragm are required to help digest, and insufficient fiber in the diet can hinder food to transmit your system properly. Boliah heartburn often accompanies the pain of the stomach and the indigestion. Hitness is often caused by acid reflux, the reverse flow of the stomach acid to the esophagus, causing burning and discomfort. Very alcohol and greasy food are often guilty. Nausea is an important signal to look out because it has several possible causes, anything, from food intoxication to the disease of crohn, a disease inflammatory crênica of the gastrointestinal tract. If you feel regularly nausea after eating, consult a doctor. Other symptoms and warning signs associated with stomach pain after feeding are: Jaunderice Belching Vomiting Fever a headache is usually only a headache, not a tumor Aggressive brain. But persistent or recurrent pain could signal a more serious problem lurks. Suspecting something sinister? Consult this graph and see your METHIC. What do you say?: Your secondary symptom: light pain in the From your thigh a hidden cause: Herniated Diagnosis Lumbar Disc: Even if your back feel good, the pain in your feet can mean your sciatic nerve, which charges the lower back to your feet, it is pinched by a huge disk. "Can be coupled with with of pins and needles on the leg. "says Loren Fishman, MD, assistant clinical teacher at Columbia University Prevent him . Work his powers abs.Hunching his lower back at risk of displacement, says Dr. Fishman Reinforce your impulses yours. Ability to maintain a good posture. What do you say?: Your secondary symptom of calf: vermield and swelling in the area where you feel the pain a hidden cause: Thrombosis deep thrombosis (DVT) Diagnosis: until half a thousand Americans are diagnosed with DVT annually, but thousands of cases are not reported, especially between younger table jobles. "As pain is similar to a dog £ IBRA, men write, "says John Laird, MD, Members of the Vascular Center at the University of California in Davis. Avoid: drinking water. Keeping hydrated (8 jings every 2 hours) Long seat spells ensures a healthy blood flow and prevents coagulation, says Dr. Laird. What do you say?: Your neck and shoulders secondary symptom: hidden cau severe, throbbing if: Lyme disease diagnosis: the chances are good that you will not know if a peak tick tick locked in you in this See. That's why many cases of Lyme disease are reported in autumn and winter when serious symptoms set. Early indicators of Lyme include rigidity of the neck and migraines due to the beginning of meningitis. Forecast: swallowing garlic. According to a study, the soldiers that led 1,200,000 milligrams daily cipher repelled significantly better ticks than those that do not. What do you mean: secondary symptom of the judge: audible clicks when you open and close a hidden cause: temporomandibular judge disorder diagnosis (TMJ) Diagnostic: The key symptom of the Mander's acute When you open your mouth, says David Hellmann, says David Hellmann, MD, president of the Medicine Department at Johns Hopkins. Avoid: Put your joker in neutral. Instead of squeezing your teeth when stress attacks, put the tongue behind the top front teeth, as if you directed "N." What do you mean?: Your secondary symptom of mid: The color of the skin of the leg illuminates when the pain reaches a hidden cause: claudication or acute diagnosis of cyclic: "The leg pain burns that you feel DVT occurs during the sedentary periods. The pain of the claudication is similar, but only occurs when you are walking or exercising. "says Dr. Laird. Pain is caused by arthers that narrow in their upper legs, cutting the amount of blood and oxygen that reaches their muscles. Avoid: Pop Some Nuts. A recent study in nutritional surveys found that eating a handful of daily nuts of vitamin e-packaged helps prevent arthers from narrowing. What do you mean?: Your secondary BÅ5's symptom: Balance loss A hidden cause: Parkinson's disease diagnosis: The chances are fine you will develop Parkinson. Less than 40,000 Americans are diagnosed every year. But a clear and confused - early indicator is the long-term pain in both BÅOs, says Gordon Gilbert, M.D., professor of physiology and molecular pharmacology at the University of South of Florida. Avoid: hit the gyms. A Harvard study found that men working regularly are 40% less likely to develop Parkinson.
