This is easier to say than to do if you never tried before, then let us help. We mentioned above that you can raise players and objects using the tractor beam, but it is a bit more involved than that. You are flying an UFO and you have a playor in your tourist points, you need to fly directly on them and touch the tractor beam button mentioned above when the segmentation function blocks them. This will narrow your bundle of tractor and they will be sucked up, allowing you to fly higher in the sky, then knock them down to the island at high speed (although they do not damage it), or eliminate them at a distance.
