The kilometer (km) is a length of length used in the metric system. Foot (FT) is a length unit used in the standard system. Information, facts and references: Earth's equator is about 40,075 kilometers long. 50% of the total mass at the terrestrial atmosphere is located in the lower 5.6 km of the atmosphere. The Danyang-Kunshan Bridge Grand Bridge (Beijing-Shanghai high-speed railway viaduct) is the longest bridge in the world with a total length of 164.8 km (102.4 mi). Angel Falls (Mountain Auyantepui, Venezuela) is the highest uninterrupted waterfall in the world, with a height of 0.979 km (3212 feet) and a dip of 0.807 km (2648 feet). Kilometer à €^mdistance unit / Unit length Symbol / abbreviation: km where the unit used in the world; the kilometer is a unit used to measure distances or lengths. It is a standard measure for distances traveled, geographical distances and maps in most countries, with the exception of the United States and the United Kingdom, where millet is still used for this purpose. The main exceptions are the United Kingdom, Liberia, Myanmar and the United States of America, where the millet remains the standard as part of the imperial system. Definition of the unit: the kilometer (kilometer in English handwriting) is a unit of length / distance in the metric system (yes unit system) equivalent to a thousand meters. 1 Km is equivalent to 0.62 137 miles. History of the unit: even if the metro was defined in 1799 in France, the was first adopted for daily use by the Dutch in 1817 with the local name of the mijl. The myriametry (10000 meters) and the "lieues de Poste" (Polystal alloys, 4288 meters) were preferred to the "kilometer" for daily use in France in the 19th century. In the middle of the 19th century the kilometer was already in daily use in Italy and the Netherlands and the myriametry was still in use in France. The CIPM (The International Committee for Weights and Measures) officially abolished the "myria-" prefix and the "miriametre" in 1935, leaving the kilometer as a unit of length recognized instead of myriametry. Where it is used: The kilometer is commonly used on road signs to indicate the distance to travel in a given location, on maps to indicate the scale, for the indication of the odometer in the automotive industry. It is also the most popular unit to describe the distance between geographical points and places. Equivalent in other units and scales: 1 km = 1000000 mm (mm) 1 km = 100 000 cm (cm) 1 km = 10000 decimeters (dm) 1 km = 1000 meters (m) 1 km = 3280.84 feet (ft) 1 megameter = 1000 km 1 gigameter = 1000000 km Length unit in the SI metric system is based on multiples or fractions of a meter. There are length/distance measures in the SI metric system greater than one kilometer that can be expressed in terms of kilometers. 1 km is equivalent to 0.621371 mi. The kilometer is a length unit in the SI metric system and is equivalent to a thousand meters. One foot is equal to 12 inches. x Please enter the value of a unit length of the kilometer (km) to convert the kilometer on foot. There are 3280.8398950131 feet in one kilometer.1 The kilometer is 3280.8398950131 Feet. 1 km = 3280.8398950131 ft One kilometer is one of the most widely used metric units of distance and length, including countries traditionally using imperial system units. One kilometer is 1000 meters. The kilometer is used to measure distances between geographical points such as city or city, measuring the length of a path or river, and so on. Convert Kilometer A foot (pl. feet) is a common length unit used in the Imperial system and in the current U.S. standard unit system. One foot is 0.3048 meters. This unit of length has been used in Europe since the times of the Roman Empire and ancient Greece. A foot has 12 inches and 3 feet make a yard. Abbreviation for the foot is ft. Convert your feet This is a very easy converter to use kilometer walk. First of all, just type the value of the kilometer (km) in the text field of the conversion module to start converting km to ft, then select the decimal value and finally press the conversion button if the automatic calculation did not work. The foot value will be converted automatically as you type. The value of the decimals is the number oft to be calculated or rounded up with the result of the kilometre-to-walk conversion. You can also check the kilometer to foot conversion graph below, or go back to the foot to kilometer converter at the top.
