How to convert pdf to excel in android phone.

There are dozens, probably hundreds, of Android phones on the market today. Some of them are exclusive to specific carriers, some of them are available worldwide, but only a few of them are at the top of their class. This week we wanted to know which Android phones you thought were the best available, not only because you complete a checklist of features or high-end hardware, but because you think they offer a great overall experience. Here's a look at the top five Android phones, according to your applications. Earlier this week, we asked you which Android phones you thought were the best. There are plenty of sites willing to tell you which phones are the best based on the chips inside, the camera, the storage, or the version of Android preinstalled, but those things don't always add up to a great user experience. We asked you which phones, past or present, you thought were the best, and over 300 nominations later, we came back to highlight the top five. The poll is closed and the votes are counted! To find out which of the five contenders below took the highest prize based on your votes, head to our five hive followup post to find out and discuss the winner! Looking for a decent Android phone? Sure, we know the market will be completely different within a Read moreSamsung Galaxy NoteOften referred to as a "phablet" because of its included stylus and massive 5.3" Super AMOLED display, the Samsung Galaxy Note (AT&T, \$299 w/contract) is huge, but many of you praised for merging the portability of a phone with some dis desperately needed tablet-like real estate. The 8MP and 2MP rear and front cameras and the dual-core 1.4GHz processor don't even hurt the issues, and while it's definitely not the right size for everyone, those of you who love it, and others are waiting for release on other carriers. In addition, even if the Galaxy Note ships with Android 2.3 Gingerbread preinstalled, there are plenty of ROMs available to bring it up to Android 4.0 Ice Cream Sandwich, or simply replace Samsung's TouchWiz interface completely. HTC One X/The HTC One Series is HTC's latest attempt to recreate itself, not that the company really needs à Most people who have used HTC devices love them, and the HTC One X and One S are no exceptions to the rule. The One X (AT&T, \$199 w/contract) is HTC's new flagship phone, featuring a 4.7" screen, a quad-core Nvidia Tegra 3 (international) or dual-core Qualcomm Snapdragon processor (US/Canada), Android 4.0 Ice Cream Sandwich (with HTC Sense UI at the top), built-in Beats Audio and a camera It was 8MP rear with a 1.3MP. The HTC One S (T-Mobile, \$199 w/contract) instead is a slightly smaller 4.3" screen, a dual-core 1.5GHz processor, 8MP and VGA front, Beats and Ice Cream Sandwich audio. Both devices are slimmed down, powerhouse devices designed to bring Android lovers' attention back to a select group of high-end HTC devices, instead of those dozen-plus HTC HTC released in the past. Samsung Galaxy S/S IIThe Samsung Galaxy S series of devices is among the most popular smartphones in the world, and although Samsung and Apple are involved in a patent lawsuit over the similarity between the Galaxy S and iPhone (and vice versa), that hasn't stopped the Galaxy S and Galaxy S II from selling millions of units worldwide. The Galaxy S was one of the first dual-core Android smartphones, and definitely one of the first to introduce the new Samsung (at the time) Super AMOLED display, delivering bright colors and crisp even in bright light conditions. It's still available for a song depending on the carrier you're taking it from (in the United States, it was sold under the names of Vibrant (T-Mobile), Captivate (AT&T), Fascinate (Verizon Wireless), and Epic (Sprint) both 3G and 4G.) Story aside, the Samsung Galaxy S II is the company's current model and features a 4.3" Super AMOLED display, a 1.2GHz dual core, and while it ships with Android 2.3, most carriers have been slowly rolling out upgrades to bring the device up to Android 4.0. Prices vary depending on the carrier and the variant you're taking delivery, but one thing is for sure: when it was launched, the Most people considered the Galaxy S II the best Android smartphone if not the best smartphone available on the market, which makes the fury for the upcoming Samsung Galaxy S III much stronger.Droid Series by MotorolaThe Droid by Motorola (Motorola Milest one, internationally) series was one of the first Android phones on the market to really bring Android to the masses' and definitely the first Android phone available on Verizon Wireless at the time. It's been a tough call to group the Droid series together, but it's worth noting that those of you who named the Droid line in large numbers specifically mentioned scrolling models, not candybar models like the Droid Razr, Razr Maxx, or the Bionic (although they all have strong nominations as well). All available on Verizon Wireless in the United States. The Motorola Droid 4 (VZW, \$199 w/contract) is the current iteration of the phone, featuring a 4" qHD display, 1.2GHz dual core, 8MP rear and 1.3MP front cameras, and more specifically, a slide-out backlit keyboard that allows the phone to be used in both modes Vertical and horizontal without sacrificing screen the real estate industry. The Droid lineup is still one of the few high-end Android devices to feature a physical keyboard, which makes it popular for both portability, and with people who prefer physical keyboards to those on screen. The Droid 4 sports Android Gingerbread, and ran Verizon Wireless' 4G network.Samsung Galaxy NexusThe Samsung Galaxy Nexus (VZW, Sprint, \$199/w contract, \$399 unlocked) is the current official "Google Phone", having launched with Android 4.0 Ice Cream Sandwich and currently as the flagship Android device. It features a 4.6Å" Super AMOLED display, a curved contour screen, a dual-core 1.2GHz processor, and 5MP and rear and front cameras. It is a pure Google experience, which means that the phone is (mostly) free of bloatware and other preinstalled applications from carriers and manufacturers, and in particular missing Samsung's TouchWiz UI layer in favor of a clean version of Ice Cream Sandwich. The phone also sports payment system NFC Google, Google Wallet. The camera boasts zero shutter lag, and it was the first phone to launch with Ice Cream Sandwich preinstalled, and it is still one of the few devices that you can get that already has it. If you want the most true and pure Android experience possible, or want an Android phone that is officially supported by Google, this is. Here, the top five Android phones, based on your application. Time to vote for the sample. It was difficult this week to run down the top five considering that there are three Samsung devices running, but some of them got more nominations than some of the other combined contenders, so we can't ignore the fact that many of you have a strong opinion on these specific models. Do you have anything to say about the candidates we missed? Didn't your favorite phone get enough nominations to be included? Remember, the top five are based on your most popular nominations from the call for thread contenders from before in the week. Share your thoughts in the comments below. The Hive Five is based on readers' nominations. As with most Hive Five places, if your favorite has been left out, it is not because we hate it — it is because it did not get the required nominations in the call for contenders mail to make the top five. We know it's a bit of a popularity contest, but if you have a favorite, we want to hear it. Do you have a suggestion for the Five Hive? Send us an email to tips+hivefive@lifehacker.com! Photo of Pittaya Sroilong. Android phones are some of the most customizable and versatile devices on the market. If you are a photographer, a power user, or simply looking for a phone to get the job done, there is an Android device out there for you. With this wide range of options, it can be overwhelming enough to choose an Android phone for you. To help, here are the best Android phones available today. Google Pixel 4a Price: \$349 (non-5G); \$499 (5G) 5G: Only in version 5G This mid-range phone from Google boasts a decent camera, sophisticated design and solid software. It is a great option for players and photographers likewise that they are not trying to spend extra on a tip phone, but still want respectable performance. One of the biggest advantages of Pixel 4a compared to its competitors is its three-year software update guarantee. Unlike many other cheap Android phones, Google offers OS andsecurity that prolong the life of the phone. The Pixel 4a comes with features such as a native Recorder app, an updated messaging app with an iMessage atmosphere, and an 18W fast charging adapter in the box. From playing music to pulling up Twitter profiles, Google Assistant Assistant a quick and easy way to do many things without even unlocking the device. CPU Specifications: Qualcomm Snapdragon 730G (non-5G); Qualcomm Snapdragon 765G (5G) Screen size: 5.8 inches (non-5G); 6.2 inches (5G) Screen resolution: 1080 x 2340 Front camera resolution: 8MP Rear camera resolution: 12MP dual-pixel (non-5G); 12MP dual-pixel and 16MP ultra Large Memory: 6GB Storage Capacity: 128GB Battery Life: 9 Hours Motorola Moto G Power Price: \$249 5G: No With some of the best battery life available anywhere and decent performance, the Motorola Moto G Power is one of the best budget phones you can buy. Its \$249 price makes it among the cheapest smartphones of the major manufacturers. Better yet, its updated design and solid 6.6-inch display means you get more for your money. The Moto G Power has 4GB of RAM and is powered by a Qualcomm Snapdragon 665 octa-core. Even though it's not as powerful as the most expensive phones, the phone is still performing during games or watching videos. CPU Specifications: Qualcomm Snapdragon 662 Screen size: 6.6 inches Screen resolution: 1600 x 720 Front camera resolution: 8MP Rear camera resolution: 48MP Memory: 3GB Storage capacity: 32GB, expandable to 512GB Battery life: Up to 3 days One Plus 8 Pro Price: \$799 5G: Yes, with T-Mobile What distinguishes the OnePlus 8 Pro is its incredible display quality. Even at 60Hz battery-saving, this phone display has incredible color accuracy and brightness. Raise the notch to 120Hz, and the AMOLED 2K display really shines. Especially considering its powerful display, the 8 Pro has good battery life. If it runs out, the Warp Charge 30T is included in the package and can recharge the battery in less than an hour. Unlike most phones in the same price range, the OnePlus 8 Pro doesn't offer universal 5G compatibility. You can access the top 5G speeds if you use T-Mobile, but Verizon and AT&T users are stuck with 4G speeds. CPU Specifications: Qualcomm Snapdragon 865 Screen Size: 6.78 inches Screen Resolution: 3168 x 1440 Front camera resolution: 16MP Rear camera resolution: 48MP Memory: 8 or 12GB Storage Capacity: 128 or 256GB Battery Life: 10 hours Samsung Galaxy Note20 Price: \$ 9999.99 5G: Yes The Samsung Galaxy Note20 has been released as the most affordable alternative to the Ultra version, coming at just under \$1,000. As a result, it doesn't come with many of the features that Ultra boasts. Despite that, it retains enough of these features to remain a valid option for anyone looking to spend a million dollars on an Android phone. The Note20 supports the S Pen. So, if this is what you invested most, this phone is a cheaper way to get one than the Ultra. Compared to its most expensive brother, this phone has slightly worse performance, with 8GB RAM and a Qualcomm Snapdragon 865 + chipset. It features a respectable camera with two 12MP lenses and a 120-degree ultra-largo lens, which makes it suitable for most everyday users. Like Ultra, it can also record video instabilized 8K. Specifications CPU: Qualcomm Snapdragon 865+ Screen size: 6.7 inch Screen resolution: 2400 x 1080 Front camera resolution: 10MP Rear Camera Resolution: 12MP ultralargo, 12MP wide angle, 64MP telephoto Memory: 8GB Storage capacity: 128GB Battery life: 12 hours Samsung Galaxy Note20 Ultra Price: \$1,299 5G: Yes The Samsung Galaxy Note20 Ultra was widely crowned as the best Android phone in 2020 and for a good reason. With a bright and beautiful display, lightning performance and the excellent S Pen, Note20 Ultra is both a phone and a productivity tool all in one. The phone is equipped with 12GB RAM, expandable storage space, and a Snapdragon 865+ processor. As a result, it is fast and easy to use for anything, from movie streaming to games. Where the Ultra really shines is in its beautiful display and compatibility S Pen. One of the first phones to adopt a 120Hz screen, displays details and colors at an incredible level. CPU specifications: Qualcomm Snapdragon 865+ Screen size: 6.9 inch Screen resolution: 3088 x 1440 Front camera resolution: 10MP Rear Camera Resolution: 12MP ultra-largo, 108MP wide-angle, 12MP telephoto Memory: 12GB Storage capacity: 128 or 512GB, expandable up to 1TB Battery life: 12 hours Samsung Galaxy S21 Ultra Price: \$1,199.99 5G: Yes Samsung Galaxy S21 Ultra justifies its high price with a really impressive set of features. This includes five cameras, universal 5G compatibility and S Pen support. Redesigned with a new contour body and five cameras, the S21 Ultra is built to amaze. It is the first Galaxy S phone to offer compatibility with the excellent S Pen, making it a great option for artists and notors. With a 120Hz 2K AMOLED display, the images are bright and accurate colors. This feature is particularly appreciated when you look at the photos taken with the impressive camera of the phone, which offers a zoom up to 10 times and a nice contrast, autofocus and stabilization. The Galaxy S21 Ultra is compatible with a wide range of 5G frequencies, including all current networks and even some that have not yet been used. In this sense, it is a great investment for those who are strongly interested in testing the new 5G technology as soon as possible. CPU specifications: Qualcomm Snapdragon 888 Screen size: 6.8 inch Screen resolution: 3200 x 1400 Front camera resolution: 40MP Rear Camera Resolution: 108MP wide, 12MP ultrawide, 12MP wide angle, two telephotos 10MP Memory: 12 or 16GB Storage capacity: 126, 256, or 512GB Battery life: 11.5 hours Bearing
