How to recover deleted dcim folder in android phone

How to recover dcim folder in android. How to recover deleted dcim folder android. How to recover deleted dcim folder.

My phone can be a useful tool to quickly take pictures of friends and family. If you accidentally deleted an important photo, you don't need to lose that memory forever, since it's a relatively simple process to recover lost data. When you delete a file from the phone memory, it is not actually canceled. You can use a file recovery utility to scan the phone memory and retrieve the lost image file. Use one of the resource links to access a data recovery program how to retrieve my files or DATE doctor's recovery. Download the program and follow the on-screen installation instructions. Remove the mobile phone memory card. Insert the card into the corresponding port on the computer integrated memory card reader. Acquire an external card reader if your computer has an integrated unit. Attach the card reader to a USB port and then insert the memory card into the player. Open the data recovery program. Choose the "Complete Recovery" or something similar option. Click "Next". Click the check box corresponding to the memory card connected to the computer. Click "Next". Browse the list of file types that the program can recover. Click the labeled "images" or "graphics" check box. Select "Next". Click "Start" and wait for the program to search for deleted image files on the phone memory card. Check through the list of detected files and find what you want to recover. Click the file and then choose "Save". Choose the location on your computer's hard drive or on the phone memory card where you want to save the recovered file. Repeat the process for each file.
