# My android phone will not download apps

Why my android phone can't download apps. Why won't my app download android. Why my android can't download apps.

Not being able to download applications from Google Play Store is a common problem among Android users. And while usually gives an error code, some problems are completely random to deal with. So, are you able to download applications on your Android phone? Well, we are here are some of the possible corrections for the same. Continue reading. Also, read | How to Fix Download Expert Edition in Google Play Store Fix Unable to download applications Problem in the Play Store 1) Check the connection and storage space The first and most simple thing you need to check is if you have a stable Internet connection and one Sufficient amount of storage space. If on the WiFi site, try to switch to mobile data and re-try the download. Also, disable the VPN, which could be the possible cause obstruct the download. 2) End Application, Clear cache and data Give Play Store A new start can help you set a lot of general problems, including errors when downloading applications. To do the same: Open Settings> Applications and Notifications> View all applications and access the Google Play Store's Info app page. Tap Force stop and check if the problem is resolved. Otherwise, click Clear Cache EU Cancel data, then re-open the Play Store and try the download again. Now, the Google Play Store is also based on other processes helped by Google Play Services and Download Manager. So if you're king in front of problems with Play Store, despite deleting your data, we recommend clear and data cache for Google Play Services, Google Services Framework, and Download Manager in a rafest also, make sure that the Download Manager is in a state of enabled, and you have accidentally disabled while the intention of removing bloatware. 3) Uninstalling and reinstall Play shop updates If you still can adopt Download applications after emptying the Play Store cache and data EU services, ITA's recommends to Updates Play Store Uninstall and update again. To do this, open settings and head for all applications in the Applications and Notifications menu. From the list, select Google Play Store, click three points in the upper right corner, and tap Uninstall Updates, then tap OK to confirm when prompted. The Play Store app will be restored to its factory installed version, clear any bugs or problems with the previous version. That being said, now you can update again for the new version next to loading the apk from apkmirror. 4) Remove and add your Google account again on the device if nothing works, the final step would be removed and re-adding the Google account on your device. To remove your Google account: Open settings to your Android phone. Touch Account. Select the account you want to remove and click Remove Account (you may be asked to enter the PIN PHONEA S or PASSWORD). To add the Google account again: Open Settings and Head to the Account section. Touch Add Account and select Google. Enter e-mail ID, password and follow the on-screen instructions to add the account. Now, open the Play Store, select the account from the drop-down menu in the sidebar and try the download again. 5) Apps WON'T Download on the setup phone just if you've passed through a factory reset or is configuring a new device, it is likely that the new app WON'T Download to all. In this case, the Play Store will say a waiting Download for everything in the queue. Well, this is just because your Google account is in synchronization mode or download applications connected with the account. So just wait for the download to complete and then try again. To accelerate the process, you can deactivate data synchronization into account the settings for a minute or two and reactivate it. As mentioned above, make sure you're running on a stable Internet connection. 6) Resolution of error codes There are a couple of other problems related to the Google Play Store. In general, Google provides an error code for them. That being said, here's how to interpret and resolve most common error codes on the Play Store. Error 101: The phone has installed too many application applications Uninstall the old and unused apps. Error 194: Delete the cache and data for Google Play services and the Google Play Store. Error 403: You are using two different Google accounts to buy apps on the same device. Consider using the correct account and removing the other. Also, try deleting the proxy option in the APN settings. Error 492/498: the dalvik cache of the phone is full. Try uninstalling the unnecessary apps and deleting the cache partition through your phone's recovery. Error 911: There is a problem with Wi-Fi connection, or you may be required to cancel the data cache. Disconnect and reconnect to the wifi or transparent cache network. Error 919/101/923 / 921: The storage of your device is inadequate. Free a certain space to continue downloading app. This could also be caused by incorrect APN settings. Error 927: Download is impossible because the playback store is updated. Wait a few minutes until the Google Play store is completely updated. If the problem still persists, proceed with the deletion of the Play Store data, Play Services and Download Manager. Error 944: Google servers are having connectivity problems. Wait until the problem has been solved. By wrapping so that this was a simple guide on how to solve the error Unable to download the app error on Google Play Store. As evident, the general solution for the app download problem is to cancel the cache and data for Google Play Store, Play Services and Download Manager. However, if the problem does not rectify, you can uninstall the Play Store updates or remove and adjust your Google account. In some cases, even a simple reboot could adjust the casino.
