10 Principles of EcoFurn®

All our actions and operations are guided by 10 principles: attractive, durable, fixable, recyclable, transportable, commercial, partnership, communicating, international, ever-improving. Attractive We hope the design language of our products touches people. The starting point has been to emphasize practicality. Most of our products can be folded for transportation and storage. The products are always designed for heavy use: they can bear also higher weights and most of them are suitable for outdoor use. Affordable design for everyday use. Our own factory team is responsible for the product design with our head of design Jussi Maula. Durable We use good quality, genuine solid wood only. We never offer products made of veneer, nor do we use chipboard, MDF or any other industrial board or wood derivative product. We always calculate the thickness of the wooden parts to the maximum – so we do not seek material savings at the expense of the durability of the product. The durability properties of the products have been extensively tested before entering the market. For a long-lasting product, it is important to follow product-specific use and care instructions that come with the package and can be found on our website. Fixable Spare parts are available for most EcoFurn® products. In many cases, the product can be easily repaired by replacing only one part. Properly cared for, solid wood is a long-term partner. We do not encourage throw-away society and one of the fundamentals of our operations is to create products that last for the next generation. Recyclable Every EcoFurn® product and its packaging is 100% recyclable. We do not use plastic parts or other difficult-to-recycle materials in our products. All wood parts can be recycled as wood waste, hemp rope is compostable even in home compost and metal parts can be recycled as metal waste. The packaging carton is recycled with the carton waste. EcoFurn® products are highly carbon-binding, environmentally and climate-friendly products and are excellent examples of a functioning circular economy product. The possible plastic packaging material can be recycled with plastic waste. Transportable EcoFurn® products are packed into as small packages as possible. Some of the products are delivered unassembled in flat packs and require customer’s assembly work, some are delivered ready-to-use. We want to reduce the volume of each shipment, specifically at online stores thus saving both natural resources and, ultimately, consumer costs. Durable, protective, material-efficient and easy-to-deliver packaging is the core competence of our logistics. Internationality is obvious for us, and that determines also product and packaging design. Commercial Can an ecological product be even cheaper than a non-ecological factory product? It is difficult, first of all due to the price of raw materials. One kilogram of raw plastic costs a few cents, while one kilogram of raw wood costs almost one euro. However, at EcoFurn®, we are bridging the gap with good product- and production design, 100% use of raw materials, tuned logistics and imaginative communication, and hard work. We actively campaign with our resellers and want our price level to be accessible for everyone. We aim for more sales but less burden for the environment. Without forgetting product quality, durability and long life of the products. Purchasing an EcoFurn® product is always an environmental act. Partnership We create partnerships to achieve our goals. We work with our customers during product development of our brand or of their own product lines. We participate in projects and organizations that promote climate- and environmental friendly options and sustainability. We have created the EcoFurn® Peloton -concept to help other companies sharing our values to internationalize with us. Through good partnerships, we fight against copycats in the form of faceless capital and greedy commercial giants. As a small player, co-operation is the way to make our voices heard! Communicating One of the most important competences of a small business is communicating cost-efficiently. We are constantly improving our communication channels, especially social media channels. We always serve also consumers directly. Need help, maintenance tips, information on the material options that best suit your use, ideas? Or do you have new product ideas or collaboration suggestions? Send your message to hannu@ecofurn.eu , let’s begin a dialogue. International As a small company in fierce competition, we are searching customers around the world. Internationality is the cornerstone of the survival for a small business, too. Our goal and message for the sustainable consumption is global. Ever-improving Real people are working here – over 40 happy experts. We hate failing and we detest mistakes, but they do happen to us too. Our products always have a warranty and we want you to have a genuine EcoFurn® product that works for you. We have spare parts and advice to extend the life of your EcoFurn® products. We stand behind our actions and products and apologize for any inconveniences and failures we have caused. Even though temporary – we are eager to fix our mistakes! EcoFurn® products are made of wood from carbon sink forests that store carbon effectively. Products are friendly to climate and environment, good examples of circular economy. fuiste tu letra ricardo arjona y gaby moreno letra. fuiste tu letra ricardo arjona y gaby moreno video. fuiste tu ricardo arjona y gaby moreno letra en vivo. letra de fuiste tu ricardo arjona y gaby moreno. letra de la cancion fuiste tu ricardo arjona y gaby moreno. fuiste tu ricardo arjona y gaby moreno letra youtube. ricardo arjona y gaby moreno fuiste tu letra y acordés. karaoke fuiste tu ricardo arjona y gaby moreno letra
