Byte is a new Social Media application, published January 24, 2020, which allows users to upload six second videos. Today, short videos are so popular that it is difficult to remember a moment before they were all over the world. But a single application started the short video mania: screw. With six seconds video loop, screw offered creators a limited format with unlimited potential and quickly grew a dedicated user base. The platform launched the careers of creators Jake and Logan Paul, singer Shawn Mendes, and The Good Place writer Demi Adejuyigbe, among others. Then, in 2016, Vine's leader Twitter announced that the platform would be stuck. Cue hearts break through the world. Immediately after the disappearance of the vineyard, its founder Dom Hofmann teased the release of a new screw-like platform. Originally named Vine 2.0, byte was delayed by a planned 2019 launch source. Now that it's live, Here's everything you need to know about byte, the new social media platform in 2020. Bonus: ä, Do you want to know how a viral video creator do you make millions of sales dollars? Download the free guide now. What is byte? As its predecessor, the byte application is a platform for creating six second video looping. Unlike Vine, ITA's not affiliated with Twitter in any way. It is a new one, independent of the platform. Many will compare Tiktok bytes, but the two have some important differences. First, Tiktok allows longer videos: from 15 to 60 seconds. The extremely brief nature of video byte also establishes distinguished from Snapchat (10 seconds) and Instagram stories (15 seconds). For another thing, video on byte are minimal: you can add a caption, but for the rest there is no text or video effects. Byters are split or not to add effects, with some emphasizing that the minimum raw format is what made screw so special and what distinguishes bytes from other video-fire platforms. It also differs from screw in a great way. Byte has announced a program for partners to pay creators for their work. The incapacity to monetize a popular video was an important factor that led to the disappearance of the vineyard, as a popular left creators for the platforms where they could earn money from their contents. The platform is the focused community, with the founder Dom Hofmann participating and sharing updates and information with creators actively. The Byte application is quickly improving in response to user requests, the update the application of a week after the release of new features such as audio control, stopping byte, and link sharing. The first reviews are positive, with a rating of 4.3 on the App Store. Many reviewers are for ex-screw users who are enthusiastic about the return of the format. And a series of popular screw stars have returned to the platform, as well as the celebrities like YouTube Creator Louis Zong and Gloe Stella Finneas or Connell. Byte is already facing his first important challenge: it is a spam account tide. In an update, Hofmann promised that moderation and commenting filter were in works to address the issue. How to use byte byte has an elegant design, simple interface. It is easy to upload videos, explore the content, and see what other users are doing. Among other things, a user byte is a byter, and an ISA video that you guessed a byte. Here's how to start using byte: How to make a byte profile just choose a username (20 characters or less) and upload a photo. You have the possibility of adding a different display name and a bio to your profile. This to! How to Navigate in the Byte You'll menu See a video trend For you as the first screen. At the bottom is the menu bar, with five buttons: home, explore, records, activities and profile. Casa will show you trends video on the platform. Touch the screen to see comments on each video, as well as the total number of points of view. Scroll down with a finger to see new videos. You can share (to REBYTEÄ €), as or a comment on each byte by tapping the buttons next to the name of the creator. Click on the byter name to see their profile and follow their account. Account. You will allow you to search for the platform from the username or explore by channel, as a comedy, pets, experimental and beauty. You can also watch trendy videos (popular now) or see the latest news (the new videos loaded on byte). The record will allow you to publish videos (more on the one in a minute!) The activity will allow you to check the interactions on your bytes, including I like it, the comments and the follow up by trunk companions. Profile will display your bio name and screen, allow you to edit your profile and show the bytes you have uploaded. You can also find your settings here. How to upload your first byte Click the Central button to open the Record screen. You can upload videos and images from the camera roll or record live in the app. A progress bar along the best track your remaining time (six seconds passes quickly!). In the default record camera, the central button is pressed to start recording and release it to interrupt. You can also change the camera mode by going to your profile. Press the three points next to the Edit Profile button at the top right to open the settings, then scroll down to camera mode. Select Classic to register by tapping and holding down on the screen. The default mode is classic. Once you have registered, touch the arrow forward in the upper right corner to see your video finished. You can add it to a canal and write a caption if you want, but these are optional! The caption limits are generous, but most of the brilliant keeps them short and taken. Unlike Tiktok, you cannot add effects such as adhesives or text to your videos. It is very streamlined. So once you added your caption, you're ready to publish! How to control your business See who is welcome and commenting on your bytes under the Activities tab. Touch the photos of the Biters profile that are engaging with your videos to see their profiles, where you can follow them back or look at their bytes. How to find more builders to follow the byte app is all about the community, so don't be shy! Browse videos on the home screen or explore by category and username to find content you love. So far there is no way to explore the APP from hashtag, so you have to look for names of specific profiles or browse within the categories. How to monitor your growth on byte Find out who is the following account following the profile section. Clicking the three points next to the Edit Profile button at the top right, you can open the settings. Scroll down to find your followers and see who your fans are. You can also find some fun functions on the Settings tab. My favorite is the app icon, where you can change the point of byte on the home screen. What, don't you keep the color code of your color? Byte Demographics Byte has been downloaded 1.3 million times within a week of launch, and was downloading number one in the iTunes App Store at the weekend following its release. Because the platform is still so new, no data is available on the user's demographics. However, we can make some educated assumptions. The Tiktok age is more popular between Gen Z, with 41% of users between 16 and 16 and 24 years old. However, inclined vine, with only 28% of users in the range from 18 to 24 years. Byte seems to be popular even with the audience of Gen Z, judging by the self-reported users of the users. Location in the week after launch, most byte downloads (70%) were by users of U.S. Canadian users consisted 6% of ucca downloads and users. 7%. For brands with a North American audience, byte is a good fit. How trademarks can Byte Byte is piloting a different model of advertising than other platforms, promising no Ä € ä, - Ä "pre-roll" announcements (those who appear before the content you want to look, like on youtube) or announcements in your search feed (as on Instagram). They also promised not to make retarting-based ads, which anyone has sought an article and then has been infested by it for months you will appreciate. So, what do they belong to their advertising strategy? Byte hopes that Their ads celebrate creativity and community, focusing on the quality of Advertising campaigns will be managed through their partner program. Participation in the partner program is at invitation, even if the trademarks and individuals can apply for the exam through an easy two-question Google form. All applications will be controlled and the number of partners will be limited to maintaining the platform to become excessively saturated with promoted and sponsored content. This seems to me a good strategy to keep attention to authors, and also avoid the ad trap that users exist or annoy (platforms of something similar to Instagram have struggled in the past.) Hofmann has set a goal of launching the program Partner within two to three months release of the apple S, there are still no announced partners. Since the platform is new, but in rapid growth, there is a lot of potential for brands to establish their presence on the byte. Getting a competitive advantage by increasing the premature public with, new original content. Here are some ideas for use byte successfully. Creating a Meme-Nike format has launched the first ever byte February 1 advertising campaign. It is characterized by a series of a video car Hail Marya, which showed people launch and capture passes soccer impossible. The countryside worked for a week with a close-up category in the Explore tab. The campaign was perfect for six-second format, using a simple editing makeup to make it seem that someone was throwing a ball to themselves. It is also aroused other users to play with the size and make a car Hail Mary Mary Bytes. Inspiring other creators and having fun with the That's s format what byte is all. Share original content EÄ € s tempting to share the same video on more platforms: you save time, and allows more people see that big thing that has spent so much doing time! But ultimately reinserting the identical content hurts your brand. This is especially true for byte, where users are likely to be active on Tiktok and YouTube as well. If you try to send the same video, they will notice LL and tune out. Furthermore, the platform emphasizes creativity as a fundamental value. Trying to make it frank with recycled content here is against the spirit of the app. They commit to growing the public as the program for partners will be limited, the CAÄ ± a t brands rely to be able to buy visibility. There'sÄ € s No warranty Your company will be accepted as a partner, so you should focus on organic involvement with your followers. This means sympathy, repexing and commenting on other video bytersÄ €! Since you can't try byte by Hashtag (yet), explore the categories to find users who adapt to your audience. You want to involve in a proactive and responsive way: to answer and follow again when users comments on your videos or follow, and look for other creators to interact with. Keep an eye on byte statistics (caliber, rebytes and comments) to monitor your commitment. As with any platform, these analyzes provide useful information in your performance. Pay attention to special occasions probably have a calendar of social media content with special occasions, parties and other important moments, right? Otherwise, you should! Byte is a platform that rewards timely content, so you want to lose any short-term opportunities. On Valentine's Day, the most visa and trends videos were heavy on V-Day jokes. No occasion is too small or too stupid for a small video that celebrates, so as to be creative! Share a DIY fast or tutorial for beauty brands, kitchen, crafts or of Creative sectors, mini-tutorials are a great use of byte. A brand like Sheertex that creates content showing people looking for (and not) to tear his tights signature would also be a good shape here. The trick is to show your product in a way that attract intelligent attention. Be funny! Easier to tell you to do, right? But as a screw, the byte application is a outbreak for funny videos. The short format is ideal for gag and stupidity. If your brand voice is serious, then this application may not be the best best But if you connect with your audience through humor and whiteness, byte can be a great place to build connections. It is also a place to be casual and out of the cuff, so it's the perfect place to test concepts, beats and campaigns. See quickly if people respond to your idea. Every new app is like a new language. It takes time to learn, but the best way to do it is immerse yourself. Immerse yourself and have fun! Bonus: Do I want to know how a viral social video creator makes millions of dollars in sales?
