home screen. This can be found in Preferences > Import/Export > Send Workbooks to Devices. You don't actually have to load content into the second connection<sup>3</sup>; provided that metadata management<sup>3</sup> is set to automatic. However, when you updated back to 3.31 and tried again, the metadata in the series was not written back to the device. Is there something I'm doing wrong or some other way to get Caliber to automatically download the series information<sup>3</sup> the Internet? I hope this helps. The metadata for the series is displayed on the caliber desktop and web interface. In caliber 3.31 [64bit] on Windows 10, the series metadata is not being written to my Kobo Aura. What would be very useful is if Caliber could automatically move the series from the title field to the series field. Or when the series is identified separately and repeated in the title. Title.
