[Continue](#)

Of the above bugs as well. The streamer fishing has been pretty good lately. Especially in the low light of mornings and periods of cloud cover or rain. All of the rivers are currently Wadeable and in good shape with temps creeping up slowly. The Drakes are happening on the main and East Branch as well as a few on the lower half of the West Branch. Have had a few swarms as well, with the main wind gusts today we should have good weather for the week. The main Delaware at Lordville is running 1080 cfs and 62 degrees. The upper West at Stilesville is currently at 597 cfs and 47 degrees and down at Hale Eddy we have 580 cfs and 50 degrees. We should see some Blue Winged Olives today, which have been pretty good lately from afternoon on till the evening. The upper West from the PA border up to the dam is closed until April 1st of next year. Pretty typical this time of year and as we start to get some cooler temps later this month the West, and eventually the upper main, begins to look better and better. The water is still looking good with that extra water from Cannonsville into the West Branch which also helps keep water temps down and is better for daylight bug activity. The East still has some decent stain to it as does the Beaverkill which is running 2000 this morning. Without rain the rivers continue to drop and are all very Wadeable and clear. LotsaAAA Luck WeeAAÁve got some cloud cover and a bit of drizzle to start the week. These water levels and conditions are great for this time of year and those who have access to boats. The West Branch at Stilesville is currently 2040 cfs and 53 degrees, steadily climbing as Cannonsville spills. For the streamers, many patterns will work and fishing them slow is going to be your best bet and even focusing on slower pools and deeper slots versus hitting the banks this time of year. Even with the sunny skies the small Blue Winged Olives will be the most likely bugs to see from afternoon on. The West Branch at Stilesville is now running 3010 cfs and 47 degrees, a lot warmer than weeAAÁve had due to that warm spilt coming over the top. LotsaAAA Luck This morning is starting out pretty sunny and calm with highs in the low-70eÁÁAs later today and minimal wind. They have started to cut the water back from Cannonsville reservoir in anticipation of extra water from the Lackawanna resuming on Monday. The rivers continued to drop a bit over the last 24 hrs and everything is currently very Wadeable and clear. Rusty Spinners in the appropriate size are a must have this time of year. LotsaAAA Luck WeeAAÁve got a nice, cool late-summer morning with temps around 50 to start the day with highs later in the mid-70eÁÁAs. LotsaAAA Luck Today is a bit milder with cooler temps, a bit of cloud cover and a light wind. Everything is Wadeable and clear with no real rain this weekend. The upper East at Harvard is at 284 cfs and 53 and down down on fish we have 1050 cfs and 58 degrees. LotsaAAA Luck we have some temps on bass 30 to start the day with a high temperature of 38 degrees later this afternoon. The main system in Lordville is now 5320 cfs and 51 degrees as well. With the current air and water temps, the western agency will be the only water with safe temperatures to fish the predictable future. Lota Lucky that we have a drizzle this morning, with light rain "at the beginning of the afternoon and about 1/3 of an inch forecast for today. Small ginger spinners for sulphines are offered for nights also, lotsa "lucky" we have a lot of sun poking this morning with high later in the 60s with a little cloud cover after. East at Harvard is now 1790 CFS and 41 degrees and downriver in the fish. We have 3900 CFs and 43 degrees. It looks like a half an inch tonight for tomorrow morning. The main Delaware in Lordville is running 2580 CFS and 58 degrees and is running very clear, especially when we stop downriver like the two rivers has a chance to mix in the morning and if the conditions are right, you will beat In Spinner falls during mid-morning hours. There are some trichos in the lower west or on the eastern branch as well. The fish are becoming a little less sporadic while eating with increased water times. The top branch in Stileville is running 330 CFS and 43 degrees during low at Hale Eddy, we had 545 CFS and 47 degrees with just a little color appearing on the banks. Still good flow to temps in mid-August and water are gntoo close. Nymph with small pheasant tails and pupa caddis are accelerating when going subsurface. Bugs are still the same with #16-18 Sulphurs making up the majority. LotsaAAA Luck Today is starting out bright and sunny, pretty much like yesterday, with no wind and temps peaking in the upper-70eÁÁAs later today. The main Delaware is running 2790 cfs and 46 degrees. Still seeing the same bugs with Henrickssons, BWOeÁÁAs, Blue Quills and caddis listed below. The upper East branch at Harvard is running 823 cfs and 46 degrees and down at FishsAAA Eddy we have 1420 cfs and 51 degrees. The upper West Branch at Stilesville is currently running 542 cfs and 46 degrees and down at Hale Eddy we are looking at 606 cfs and 49 degrees which will drop to the mid-600eÁÁAs soon. We had some decent bugs in the afternoon on the West with some good #14-16 Sulphurs, some #19 Cahills, #19-20 Olives and a few March Browns. LotsaAAA Luck We have a sunny and warm day today with air temps in the mid-90eÁÁAs and water levels on the West Branch which are dropping back down to their normal levels after a hump in the release water overnight. LotsaAAA Luck Today started out warm and sunny but we do have some clouds moving in this afternoon with some rain moving in later today after dark. It also looks like a good chance of rain the rest of the week which would be great. The East Branch over at Harvard wasn'tAAÁ affected much and is running 140 cfs and 57 degrees while downriver at FishsAAA Eddy we have 150 cfs and 63 degrees which is pretty close to yesterdayeÁÁAs flows. It looks like tomorrow it will be a few degrees cooler with some rain and clouds for the afternoon. The upper West at Stilesville is now at 1410 cfs and 53 degrees and down at Hale Eddy we have 1700 cfs and 53 degrees. Nymphing with Sulphur-specific nymphs or small pheasant tails does work if nothing is happening hatch wise. The upper West Branch did come up a bit as the reservoir started to spill recently and the current flow at }Átse ellivrdlO me erawaleD lapicnrp O .anames a alot etnarud océs meb evitse es omoc .aob asioc amú ©Á eug anames ad etrap roiam a enach aob amú e ÉÁhnam ed ÉÁhnama odnevom es avuhc amúla eug eceap Á .aralc otium augÁ e suarg 44 e scf 106 arap odnahlo somatse ,yðde elahH me axiab a etnarud suarg 24 e scf 693 odnatuceæ }Átse ellivserlits me tseW a roiepus lasrucas A .anias etnmaer los o eug setna aid od oíÁni on etnmaiceæp .etneced ©Á remaerts ed acep a sam .sasic sa atnel eug .anames atse etrap roiam a odaralones meb odis met .ocruse on srennips so moc }Ál ed r íe .sepÁÁsÁidnoc sad odnednep .mpl1-h11 sad atlov rop rartsom a maÁemoc eug sotnesi moc aed od oiem on atsoa roihem o res iav tseW reppU o e 02-81 # me serodafas arap odnahlo somatse sÁn Áp .otrep on rehlocæ arap sogb s0ubm }Áh of ÉÁn odnaq etnmaiceæp .snob otium marof sofini s0 .suarg 35 e scf 0271 somet ,yðde elahH on oxiab arap e suarg 35 e scf 0441 odnatuceæ }Átse ellivserlits me louta ouxilF O .soiciÁÁrope sresir so rehlocæ arap sacoms oúe oÁEs e oÁFÁidnuv ed sacoms s0ubm erpmes oÁEs lílhač 34 e O SI A .aid od lanif on mev eug ariolam a moc m0Ábmat ÉÁhnama avuhc ed ocuop mu rebto somevD sÁn Á .sederap me suarg 46 e scf 0730 soirÁv soia mol .esúw r0ebtaew .metno od enahlemes otium acepaj e0H .suarg 65 e scf 0921 odnatuceæ }Átse ellivrdlO .me erawaleD lapicnrp O .suarg 85 e scf 0743 odnatuceæ }Átse ellivrdlO me roiepus erawaleD lapicnrp O .siam s0ÁAm mu siam otrep rop ratsa iav m0Ábmat AIHCYNOSI A .suarg 55 e scf 0361 somet ,yðde elahH me oxíab me ahicynosi snugla ralahem ed es-euqifitrc .augÁ e ad etnarw sessen retab ed siecÁF of Ás evl remaerts mob mu e etnauilf ahnií amú .etnatropni ©Á m0Ábmat satog-atnoc od otnemirpoc o e setnerfed sepÁrdap etnet sanepa .eicÁFrepus ad oxíab oq es-odnatnemila of ÉÁs sexiep so odnaq meb manoičnif emlif on sahlanem e otneD .edadílilbisv aob moc suarg 64 e scf 0722 somet ,yðde elahH o sieván suarg 54 e scf 0551 A .suarg .suarg 84 e scf 0973 it will be very good, especially after the fish have a bit of time to acclimate to the near tripling of water running through their home. We should have another great day. It looks like a nice weekend weather-wise with some rain moving in early Sunday morning. We are still getting tons of caddis with some dark wing and bodied in the #16-18 range. We did get an increase in water on the West Branch once again as they are struggling to keep the minimum flow down at Montegue, NJ. Fishing with unweighted or lightly-weighted flies helps, allowing you to fish the fly slowly without hanging up on the bottom. The Blue Winged Olives in #18-20 and Blue Quills in #16-18 have been very good the last few weeks, we are also seeing #14-16 Hendrickssons which should be good this week with the warmer temps. Today is a different story with ideal bug and cooperative fly weather with the rain and clouds. The upper West Branch at Stilesville is now at 597 cfs and 44 degrees while down at Hale Eddy we have 664 cfs and 47 degrees. The upper East at Harvard is running 246 cfs and 56 degrees and downriver at FishsAAA Eddy we are looking at 721 cfs and 51 degrees. The rivers are still clear and very Wadeable after continuing to drop a bit since last week's rains. WeeAAÁre still seeing plenty of bugs which should be around for another week or so with some Henrickssons, Blue Quills, BWOeÁÁAs, Chimarra and Apple Caddis. March bugs are a good time get on the water this time of year with very anglers out early. The forecast looks pretty good for this week with rising temps and no towards the weekend with a chance of rain over Thursday. It looks like good weather and a drop in temps for the upcoming weekend with temps peaking in the low-60eÁÁAs and thankfully no rain. The small Olives are usually around too in the #18-22 range as well as their small rusty spinners. The bugs have been pretty good this spring with the usual mid-May mixed bag. The in are off and on in the afternoon with some pockets of bugs which usually pick up towards dark and we have been getting some spinners near dark too. LotsaAAA Luck After the rains last night the rivers have risen a bit but everything is looking good still with minimal stain to the water. The water is stable, Wadeable and dropping throughout the system. Big #12 Isomychia are also good flies to have. The mainstem at Lordville is currently 4120 cfs and 48 degrees. Ants and beetles are hard to beat this time of year as well and are sometimes better choices than the actual bugs hatching at the time. The main Delaware at Lordville is now at 4100 cfs and 59 degrees. The flow upriver in Deposit at Stilesville is now 1400 cfs and 47 degrees with pretty clear water. With the warmer temps be aware and continue to check water temps on the East and mainstem. LotsaAAA Luck The weather is looking good for today with sunshine and temps in the low-60eÁÁAs later this afternoon. Tomorrow it looks like rain moving in and a nice decrease in air temps. The hatch started early and was the strongest from early to mid-afternoon and later it became a bit sporadic as did the fish. Having some good Blue Winged Olive patterns in #18-20 is a safe bet. The upper East at Harvard is now at 976 cfs and 48 degrees and down at FishsAAA Eddy we are lookin at 2150 cfs and 55 degrees. Spent caddis in the #16-18 range have been good flies you can find some fish trash-eating mid-day, eating whatever comes your way. Streamers are also doing well with the higher water and natural colors and smaller flies tend to work well with all of the recent fishing activity. It looks to be dry for the foreseeable future which may lead to a continuing lowering of the release water. Hopefully it rains first and we can get some good weather for the week. The main Delaware is running 2790 cfs and 46 degrees. Still seeing the same bugs with Henrickssons, BWOeÁÁAs, Blue Quills and caddis listed below. The upper East branch at Harvard is running 823 cfs and 46 degrees and down at FishsAAA Eddy we have 1420 cfs and 51 degrees. We should have another great day. It looks like a nice weekend weather-wise with some rain moving in early Sunday morning. We are still getting tons of caddis with some dark wing and bodied in the #16-18 range. We did get an increase in water on the West Branch once again as they are struggling to keep the minimum flow down at Montegue, NJ. Fishing with unweighted or lightly-weighted flies helps, allowing you to fish the fly slowly without hanging up on the bottom. The Blue Winged Olives in #18-20 and Blue Quills in #16-18 have been very good the last few weeks, we are also seeing #14-16 Hendrickssons which should be good this week with the warmer temps. Today is a different story with ideal bug and cooperative fly weather with the rain and clouds. The upper West Branch at Stilesville is now at 597 cfs and 44 degrees while down at Hale Eddy we have 664 cfs and 47 degrees. The upper East at Harvard is running 246 cfs and 56 degrees and downriver at FishsAAA Eddy we are looking at 721 cfs and 51 degrees. The rivers are still clear and very Wadeable after continuing to drop a bit since last week's rains. WeeAAÁre still seeing plenty of bugs which should be around for another week or so with some Henrickssons, Blue Quills, BWOeÁÁAs, Chimarra and Apple Caddis. March bugs are a good time get on the water this time of year with very anglers out early. The forecast looks pretty good for this week with rising temps and no towards the weekend with a chance of rain over Thursday. It looks like good weather and a drop in temps for the upcoming weekend with temps peaking in the low-60eÁÁAs and thankfully no rain. The small Olives are usually around too in the #18-22 range as well as their small rusty spinners. The bugs have been pretty good this spring with the usual mid-May mixed bag. The in are off and on in the afternoon with some pockets of bugs which usually pick up towards dark and we have been getting some spinners near dark too. LotsaAAA Luck After the rains last night the rivers have risen a bit but everything is looking good still with minimal stain to the water. The water is stable, Wadeable and dropping throughout the system. Big #12 Isomychia are also good flies to have. The mainstem at Lordville is currently 4120 cfs and 48 degrees. Ants and beetles are hard to beat this time of year as well and are sometimes better choices than the actual bugs hatching at the time. The main Delaware at Lordville is now at 4100 cfs and 59 degrees. The flow upriver in Deposit at Stilesville is now 1400 cfs and 47 degrees with pretty clear water. With the warmer temps be aware and continue to check water temps on the East and mainstem. LotsaAAA Luck The weather is looking good for today with sunshine and temps in the low-60eÁÁAs later this afternoon. Tomorrow it looks like rain moving in and a nice decrease in air temps. The hatch started early and was the strongest from early to mid-afternoon and later it became a bit sporadic as did the fish. Having some good Blue Winged Olive patterns in #18-20 is a safe bet. The upper East at Harvard is now at 976 cfs and 48 degrees and down at FishsAAA Eddy we are lookin at 2150 cfs and 55 degrees. Spent caddis in the #16-18 range have been good flies you can find some fish trash-eating mid-day, eating whatever comes your way. Streamers are also doing well with the higher water and natural colors and smaller flies tend to work well with all of the recent fishing activity. It looks to be dry for the foreseeable future which may lead to a continuing lowering of the release water. Hopefully it rains first and we can get some good weather for the week. The main Delaware is running 2790 cfs and 46 degrees. Still seeing the same bugs with Henrickssons, BWOeÁÁAs, Blue Quills and caddis listed below. The upper East branch at Harvard is running 823 cfs and 46 degrees and down at FishsAAA Eddy we have 1420 cfs and 51 degrees. The upper West Branch at Stilesville is currently running 542 cfs and 46 degrees and down at Hale Eddy we are looking at 606 cfs and 49 degrees which will drop to the mid-600eÁÁAs soon. We had some decent bugs in the afternoon on the West with some good #14-16 Sulphurs, some #19 Cahills, #19-20 Olives and a few March Browns. LotsaAAA Luck We have a sunny and warm day today with air temps in the mid-90eÁÁAs and water levels on the West Branch which are dropping back down to their normal levels after a hump in the release water overnight. LotsaAAA Luck Today started out warm and sunny but we do have some clouds moving in this afternoon with some rain moving in later today after dark. It also looks like a good chance of rain the rest of the week which would be great. The East Branch over at Harvard wasn'tAAÁ affected much and is running 140 cfs and 57 degrees while downriver at FishsAAA Eddy we have 150 cfs and 63 degrees which is pretty close to yesterdayeÁÁAs flows. It looks like tomorrow it will be a few degrees cooler with some rain and clouds for the afternoon. The upper West at Stilesville is now at 1410 cfs and 53 degrees and down at Hale Eddy we have 1700 cfs and 53 degrees. Nymphing with Sulphur-specific nymphs or small pheasant tails does work if nothing is happening hatch wise. The upper West Branch did come up a bit as the reservoir started to spill recently and the current flow at }Átse ellivrdlO me erawaleD lapicnrp O .anames a alot etnarud océs meb evitse es omoc .aob asioc amú ©Á eug anames ad etrap roiam a enach aob amú e ÉÁhnam ed ÉÁhnama odnevom es avuhc amúla eug eceap Á .aralc otium augÁ e suarg 44 e scf 106 arap odnahlo somatse ,yðde elahH me axiab a etnarud suarg 24 e scf 693 odnatuceæ }Átse ellivserlits me tseW a roiepus lasrucas A .anias etnmaer los o eug setna aid od oíÁni on etnmaiceæp .etneced ©Á remaerts ed acep a sam .sasic sa atnel eug .anames atse etrap roiam a odaralones meb odis met .ocruse on srennips so moc }Ál ed r íe .sepÁÁsÁidnoc sad odnednep .mpl1-h11 sad atlov rop rartsom a maÁemoc eug sotnesi moc aed od oiem on atsoa roihem o res iav tseW reppU o e 02-81 # me serodafas arap odnahlo somatse sÁn Áp .otrep on rehlocæ arap sogb s0ubm }Áh of ÉÁn odnaq etnmaiceæp .snob otium marof sofini s0 .suarg 35 e scf 0271 somet ,yðde elahH on oxiab arap e suarg 35 e scf 0441 odnatuceæ }Átse ellivserlits me louta ouxilF O .soiciÁÁrope sresir so rehlocæ arap sacoms oúe oÁEs e oÁFÁidnuv ed sacoms s0ubm erpmes oÁEs lílhač 34 e O SI A .aid od lanif on mev eug ariolam a moc m0Ábmat ÉÁhnama avuhc ed ocuop mu rebto somevD sÁn Á .sederap me suarg 46 e scf 0730 soirÁv soia mol .esúw r0ebtaew .metno od enahlemes otium acepaj e0H .suarg 65 e scf 0921 odnatuceæ }Átse ellivrdlO .me erawaleD lapicnrp O .suarg 85 e scf 0743 odnatuceæ }Átse ellivrdlO me roiepus erawaleD lapicnrp O .siam s0ÁAm mu siam otrep rop ratsa iav m0Ábmat AIHCYNOSI A .suarg 55 e scf 0361 somet ,yðde elahH me oxíab me ahicynosi snugla ralahem ed es-euqifitrc .augÁ e ad etnarw sessen retab ed siecÁF of Ás evl remaerts mob mu e etnauilf ahnií amú .etnatropni ©Á m0Ábmat satog-atnoc od otnemirpoc o e setnerfed sepÁrdap etnet sanepa .eicÁFrepus ad oxíab oq es-odnatnemila of ÉÁs sexiep so odnaq meb manoičnif emlif on sahlanem e otneD .edadílilbisv aob moc suarg 64 e scf 0722 somet ,yðde elahH o sieván suarg 54 e scf 0551 A .suarg .suarg 84 e scf 0973 it will be very good, especially after the fish have a bit of time to acclimate to the near tripling of water running through their home.
