OCR or Optical Character Recognition is a system that converts JPG / JPEG images, for example, photographs of printed text, files in PDF format, as well as scanned documents, into text formats Microsoft Word, DOC, DOCX with the possibility of further editing and the presence of search in them. Today there is no need to retype the existing text, wasting on this precious time. Multifunctional devices help to cope with this work, which perform it in several stages, freeing a person from this tedious procedure. Software recognition of scanned text and images allows you to quickly convert graphic data into digital. The resulting files can be edited. OCR uses neural networks to search and recognize text in images. Optical Character Recognition (OCR) allows you to convert JPG photo text images into an editable text format that supports the ability to search for text in a document, copy and edit it. Our service will help you extract the text content of images and papers so that you can work with them more conveniently. If you do not need text recognition, but only a regular conversion, then select the conversion mode at the top of the site. In this case, as a result of converting JPG to Word, you will receive a Word file containing the original images stretched to fill the entire page by 100%. Why convert from PDF to Microsoft Word? Easy, it makes your PDF files editable! Grab text, edit PDFs, and more. Drop Files here Choose File Enter URL Dropbox Google Drive × Warning: You reached the maximum number of files for this function! × Warning: An error has occurred. Upload your PDF document above. Choose the Microsoft Word version you need for your purpose. Optional: Improve your result by choosing the OCR method, specifying the source text's language, and more. Click on "Start". What's the difference between DOC and DOCX? DOC is the document file format established by Microsoft Word and uses the .DOC file extension. Next to text, these files can also contain hyperlinks, images, graphics, tables, advanced formatting, and other elements. With Microsoft Office, 2007, the .DOCX file extension was introduced. It uses the Microsoft Office Open XML international standard which makes the format more accessible and usable. While newer versions of Microsoft Word can open the old DOC format, DOCX files cannot be opened in older versions. If they can be opened, it is possible that the formatting is offset or that parts of the document are missing.
