Utilizing BioComposite™ SutureTak® anchors and curved Micro SutureLasso™, surgeons are able to perform an all-arthroscopic lateral ankle ligament repair while simultaneously addressing any intra-articular pathology that may be present from the previous injury. The Arthrex Brostrom Repair System allows surgeons to perform a modified Broström-Gould procedure through a single, 1.5 cm incision. These techniques offer surgeons 2 truly minimally invasive options to treat patients presenting with lateral ankle instability. The convenient all-in-one system includes 2 BioComposite™ SutureTak® anchors, all the necessary drill guides, the Micro SutureLasso retrievers to help facilitate percutaneous shuttling of the #1 FiberWire® suture through the ATFL and extensor retinaculum. The arthroscopic Brostrom technique can be performed utilizing the Arthrex® Brostrom Repair Implant system. It can be used in acute and chronic ankle sprains. Arthrex has developed a simple, safe, and reproducible technique using the BioComposite SwiveLock® and FiberTape®. InternalBrace™ ligament augmentation repair can be used to augment to a Broström procedure. InternalBrace ligament augmentation repair allows the surgeon to correct lateral or medial ankle instability.

Brostrom repair with the InternalBrace™ procedure provides additional fixation of the repaired ligament backdown to bone during the healing ... tap, and implant the SwiveLock anchor through the guide. The InternalBrace technique allows the surgeon to support the primary Brostrom repair of soft tissue to bone for lateral or medial ankle instability repair and can be used for chronic ...
