Android material searchview

Android material searchview github. Android material design searchview github. Searchview material design android.

I was developing a small example to test some things when I came across to implement a search. After reading the documentation in the guidelines on the design materials, I started looking for a third-party library to implement it easily. I found nothing useful, so I developed him alone. What is MagoSearchView? MaterialsearchView is a nice library to implement research research in a material design approach. How do I use it? Add dependencies to your crash file: dependencies {compile 'com.miguelcatalan:materialchview:1.0.0'} Add materersearchview to your layout file together with the toolbar (add this block at the bottom part of the layout, to view it above the rest of the view): Add the search entry in the menu file: Add Definition to OnCreateptionsMenu: @Override Public Boolean OncreateptionsMenu (M menu ENU) {getMenuInflater (). Inflation (r.menu.menu main, menu); MENUITEM ITEM = MENU.FINDITEM (R.ID.ACTION_SEARCH); searchview.setMeneathem (article); Return true; } Set listeners: MaterialcearchView SearchView = (MaterzeArchView) findViewById (R.id.search_view); searchview.setOnquerytextSTListener (new material searchview.onquerytextListener () {@Override boolean public OnquerytextSubit (string query) {do some false magic change;} @Override boolean boolean overytextchange (newtext string) {do a little of false magic return;}}); SearchView.setOnSearchViewListener (New Material MaterialSearchView.SearchViewListener () {@Override Public void onsearchviewshown () {do some magic} @Override public void onsearchviewclosed () {do a little magic}}); Use VoiceSearch Allow / disable in the code: searchview.setvocesearch (true); // or false handle response: @Override protected void onactivityrestultultursult (int requestcode, int reedered, intent data) {if (requestcode == materialserchview.request_voice && ResultCode == Result.Ok) {Arraylist matches = Data.getStringarraylistExtra (grateful.Extra_results); IF (corresponst = Null && matches.size () > 0) {string searchwrd = matches.get (0); IF (!TextUtils.isEmpty (searchwrd)) {searchvd.setquery (searchwart, false); } } Return; } Super.onactivityResult (RequestCode, Guided code, data); } Add suggestions Define them in resources as a string-array: android iOS scale scale staircase > ruby javascript Add them to the object: searchview.setsuggestions (getresources (). GetStringarray (r.array_query_suggChipnstions)); Style! à € à € PASO 4: Inflammation El MenAJA® @Override Boolean Public OncreateOptionsMenu (Menu Menu) (MENUINFLATER CLASSE GETMENUINFLATER (); swelling.inflate (r.menu.menu_searchable tivitivity, menu); Return true; } Estrove: This is a qualified Que no Dough Hacer Fue Lelenar Todo El Ancho de la Toolbar de Toolbar. Yes Alguien ayudarmr pureher in Hacer Eso, Esoness SerAJa de Oro. Para Logr and Aspecto Desaado de SearchView, Puede utilizar estylos. Primero, Necesitas Crear Style Para Tu SearchView View, Que DeberAJa Ser Algo Como Exto: @ null à €
