Highest populated country

Highest populated country in africa. Highest populated country in eastern africa. Highest populated country in asia. Highest populated country of the world. Highest populated country in south america. Highest populated country in europe. Highest populated country per square km.

List of Wikipà © day Map of countries and territories per population in 2019 (the darker, the greater the population) this is a list of countries and dependent territory and, in some cases, constituent countries of sovereign states, with inclusion within the list based mainly in ISO ISO 3166-1. For example, the United Kingdom is considered a single entity, while the constituent countries of the kingdom of the low countries are considered separately. In addition, this list includes certain states with limited recognition not found in ISO 3166-1. Also given in percentage is the population of each country in comparison with the world population, which the United Nations estimates at 7.9 billion today. METHOD Before: List of countries and dependence by population figures used in this graphs are based on the most updated estimate or projections [1] by the national authority of Census, where available, and are usually rounded off. If updated national data are not available, the numbers are based on the projections for 2021 by the population division of the Department of Economic and Social Affairs of the United Nations. [2] As compiled figures are not collected at the same time in all countries, or on the same level of accuracy, the resulting numer comparisions can create misleading conclusions. In addition, the addiction of figures of all the countries can not match the total of the world. To areas that form parts of sovereign states, such as the European Union, [a] that are not sovereign states, and independent territories that have no permanent populations, such as vain claims Rios to the antagonal countries. Sovereign and dependence on the population Note: A numbered classification is attributed to the 193 Member States of the United Nations, plus the two observer states for the General Assembly of the Nations United. Dependent territories and constituent countries that are parts of sovereign states are not assigned to a numbered classification. In addition, sovereign states with limited recognition are included, but they did not give a rich classification.
