How to find blocked contacts iphone

It's no secret that people come and go in your life. Whether ex-partners, old friends or that guy you met once and never spoke to again, there's no shame in admitting we don't stay in touch with everyone we ever cross paths with. Sometimes, the best way to say goodbye is to remove those individuals from your virtual bubble, and thankfully, deleting contacts on your iPhone or iPad is a very easy process. Here, we'll walk you through the steps to do so – and fear not, this should work for all generations of iPhone and iPad, whether you own an iPhone 12 Pro or an iPhone 6S. Deleting a contact essentially means permanently deleting an individual's contact details from a given device. If you delete a contact from your email account, though, you'll also permanently delete the contact from all devices signed into that email account, so that's worth bearing in mind before taking action. From your iPhone home screen, hit the Contacts app to open up the list of individuals stored on your device. Tap the contact you want to delete, then press the Edit button in the top right hand corner of the screen. This will bring up a list of customization options for that contact, but you'll want to scroll right down to the bottom to reach the Delete Contact button.     Once tapped, the Delete Contact button will bring up a second button repeating the command; this just acts as a way of confirming this is the action you wish to take. Tap the button again to delete the contact. It's also worth noting that you can re-add any contact, any time after deleting – just in case that lucky someone manages to find their way back into your life. How to crop and rotate photos on an iPhone By Avery Martin The iPhone provides a way to sort your Contacts into Groups, or a list view, that shows all your contacts on the iPhone. The Groups option only appears if you have first created a group on your Mac or Windows computer. On a Mac, you can create groups using Contacts. On Windows, you can use Outlook to create Contact Groups that then appear on the iPhone when synced. Once you have set up groups on your Mac or PC, you can use Mail, Messages and your Phone app to choose individual groups and contacts. Click "Go," "Applications" and double-click "Contacts" to open your address book. Click "File" and "New Group." Type a name for the group in the Name text field that appears in your address book. Press "Enter." Drag your contacts into the appropriate group to separate them. Connect your iPhone to your computer using the provided USB connector cable. Open iTunes if it doesn't open automatically. Select your iPhone from the list of Devices in iTunes. Click the "Info" tab and make sure "Sync Contacts" is checked. Click "Apply" or "Sync." Click the Start menu and type "Outlook" in the search box to open Microsoft Office. Select "Contacts" from the Home tab. Click the "New Contact Group" option. Type a name for the Contact Group in the Name text field. Select the "Contact Group" tab, then select "Add Members." Select an option to add contacts "From Outlook Contacts," "From Address Book" or "New Email Contact." If you select New Email Contact, enter the information for the contact. Otherwise, select each member from your Outlook Contacts or Address Book. Click "OK" when finished. Connect your iPhone to your computer with the provided USB connector cable. Click the Start menu and type "iTunes" into the search box if iTunes doesn't open automatically. Select your iPhone from the Devices list in iTunes. Click the "Info" tab and select the "Sync Contacts" option. Over time, your iPhone's contact list can get rather extensive. Before you know it, you're scrolling forever through a multitude of people you really never call or text. The list gets even longer when you add other accounts to the device, like Gmail, Yahoo, and Outlook. In this guide, we show you how to delete contacts on an iPhone. Removing a single contact is easy, but ridding yourself of multiple contacts requires a trip online or a third-party app. We serve up four ways to trim that contact list for 2021. Delete a single contact If you need to delete one or two contacts, this is the best route. Unfortunately, you can't delete more than one contact at a time. Skip to the next section if you need to delete a handful of contacts. Step 1: Tap to open the Contacts app. Alternatively, you can access your contacts in the Phone app by tapping the Contacts tab at the bottom. Step 2: Tap on the contact you want to delete. Step 3: Tap Edit displayed in the top right corner. Step 4: Scroll down and tap Delete Contact. Step 5: Tap the Delete Contact pop-up balloon to confirm. Step 6: Repeat these steps for the next contact. Delete multiple contacts at once Because the Contacts app doesn't provide the means to delete multiple contacts at once, you'll need to open a desktop browser (not mobile) and visit the iCloud website. Apple provides a tool to delete multiple contacts at once, but it's somewhat hidden. Step 1: Go to iCloud.com in a desktop web browser and log in using your Apple ID credentials. Step 2: Click to open the Contacts web app. Step 3: Press and hold the Ctrl key and click on all the contacts you want to delete. They should all appear in the panel to the right. Step 4: Click on the gear icon in the bottom left corner. This opens the Settings menu. Step 5: Select Delete on the pop-up menu. Step 6: Select Delete again in the pop-up window, confirming your action. Remove a specific account's contact list One of the drawbacks of adding multiple accounts to your iPhone, like Gmail and Yahoo, is that their contact lists merge together in the Contacts app. The result is one long list that may have multiple entries of the same contact. To reduce this list and purge those unwanted entries, you can disable contact synchronization for each account. Step 1: Tap to open Settings, Step 2: Scroll down and tap Contacts, Step 3: Tap Accounts on the following screen. Step 4: Select an Account. Step 5: Tap the toggle next to Contacts to remove that account's list of contacts from your iPhone. Note: For contacts in Apple's cloud, you'll need to tap iCloud followed by iCloud again to access the Contacts toggle. Use the third-party Groups app If you'd rather not hassle with Apple's iCloud website or disable individual accounts, there's a third-party app that makes the process of deleting multiple contacts easy. It's free to use, but you'll need to pay \$10 to unlock all the features and disable the ads. Step 1: Install the Groups app from the App Store. Step 2: Allow Groups to access your contacts. Step 3: Tap on All Contacts displayed at the top. Step 4: Tap on the Circle next to each contact you want to delete. This circle will turn red with a white checkmark. Step 5: Tap Choose Action listed at the top. Step 6: Tap Delete Contacts on the drop-down menu. Step 7: Tap Remove from My iPhone in the pop-up window to confirm. Editors' Recommendations If you're trying to arrange a party or group trip, texting each person individually can be seriously time-consuming and iOS doesn't offer an easy way to make a contact group on an iPhone. Luckily, creating contact groups the way Apple intended is as easy as pie with iCloud. There are also a handful of free apps available in the App Store that can help you. In this how-to guide, we'll cover the ins and outs of creating a contact group with iCloud and offer a quick tutorial on how to make a contact group on an iPhone with a popular app called Groups. Further reading How to make a contact group using iCloud (cross-platform) Step 1: Go to iCloud.com and sign in to your iCloud account using your Apple ID and password. Then, select Contacts to view a list of your current contacts. Step 2: Select the plus icon in the bottom-left corner, and click New Group from the resulting pop-up menu. Alternatively, you can double-click the empty gray space to quickly create a new group. Step 3: Next, name the group and click anywhere outside of the text box to save it. If you want to change the name, double-click it and type your new group name. Step 4: To add contacts to a particular group, choose All Contacts at the top of the Contacts list, and click and drag your desired contacts to the proper group. Step 5: To delete an entire group, or just a single contact from the group, select it, click the gear icon in the bottom-left corner, and select Delete. Keep in mind that this only deletes the contact from the group; deleting a group doesn't delete the contacts within. Step 6: Your group will automatically sync with your iPhone's contact list. To use your new group, tap the Contacts icon on your iPhone and select Groups from the upper-left corner of your contacts page, then check the groups you want to use and select Done. Step 7: If you accidentally delete a group or a contact from a group, you can always use iCloud to restore it. To do so, log in to your iCloud account on the web and click Settings. Once there, you'll see a host of options for restoring contacts, files, reminders, calendars, and bookmarks under the Advanced section. Once you've created a group like this, you can then send a message to it. To do this, open Messages and create a new message. In the To: field, begin typing the name of the group and then tap on it. Then, write your message and send. Tip: Let your iPhone automatically sync with iCloud. That way, when your phone is connected to your computer, your groups will automatically be backed up to iCloud. How to make a contact group using Groups (app) Groups is a free app available in the App Store that allows you to create groups without your computer. Step 1: Open the App Store on your iPhone, click the Search tab at the bottom, and enter Groups in the search field at the top. Afterward, select Groups from the top of the resulting list and tap the Get button before tapping Install. Step 2: Launch Groups, and on the main page, select Add New Label. Step 3: Navigate to the New Group page, form a contact group name, and select No Contacts — Add Some. After you do this, you can begin adding contacts. Click on the contacts you'd like to add and click Done. You'll see a blue symbol appear right next to the group name, which you can click to personalize the group symbol. Tap Done in the top left of the screen after you've finished adding everyone you want and completely customized the group to your liking. It's important to note that you can also add the same person to more than one group. Step 4: You can add or eliminate contacts from a group after you've created it. If you want to do this, simply click the group name and search for the Manage option in the page's top right corner. After this step, sort through the contacts and pick out the ones you want to add or remove. Once you're done doing that, select Done on the top left side of the page, then click the Group name at the top to return to the original page. You can do a lot of different things with iCloud. If you are stepping into the iOS world for the very first time, we advise reading our article on how to use iCloud. Be aware that iCloud stores your data on Apple's servers, which implies it can be vulnerable to hacking. To battle this, we highly suggest that you use two-step verification to enhance your iCloud security. Editors' Recommendations Deleting contacts from your iPhone is easy, and there are several ways to do it. This article outlines the best way to delete a single contact, multiple contacts, or all of your contacts. Perhaps it's time for some house cleaning, or you just don't need some contacts anymore. Whatever the case, here's how to remove contacts from your iPhone. Delete a Single Contact Go to Contacts and tap the contact you want to remove. Tap Edit > Delete Contact. Confirm you want to delete the contact by tapping "Delete Contact." Delete All Contacts From a Source iPhones can pull in contacts from email accounts such as Gmail, Outlook, or Yahoo Mail. Overall, this makes it really easy to add and remove contacts on your iPhone. If you remove a contact from a linked account or from your iPhone (as described above) it will be removed in both places. To delete all contacts from a single source, you can either delete the entire account or just turn off contacts sync from that source. You can find out which sources are linked by going to Settings > Passwords & Accounts. The accounts that sync contacts will have the word "Contacts" under it. Tap the account from which you want to purge the contacts. From there you can turn off contacts sync by toggling the "Contacts" switch and tapping "Delete from My iPhone." You can also delete the entire account (mail, contacts, calendars, and notes) by tapping Delete Account > Delete from My iPhone. Delete Some Contacts, but Not All of Them This is where things get tricky. There is no way to delete multiple contacts on an iPhone (unless you're deleting them all)—it's all or nothing. However, all is not lost. You can delete those contacts from the source account, and those changes will sync to your iPhone. Depending on where your contacts are, there will be different ways to remove multiple contacts. Consult your provider's documentation (e.g. Gmail, Outlook, Yahoo Mail). But now you're thinking: what if they're contacts I have saved in my iPhone and not in an account? Well, you're in luck, because there's a workaround for that. Go to iCloud.com and log in with your iCloud credentials. Click "Contacts." Select the contact you want to delete by Ctrl+clicking on them. border Press the Delete key on your keyboard and then click "Delete" in the dialog box that appears. Once done, the changes will sync to your iPhone. Khamosh Pathak Without your contacts, your iPhone isn't a complete phone. You can import your contacts from Google or iCloud, but there will be times when you'll need to manually add a new contact to your iPhone. Here's how it works. How to Add Contact Using the Phone App You can add a new contact using the "Phone" app and the "Contacts" app. The process is the same. In this example, we'll use the Phone app (as you might already be familiar with it). Open the "Phone" app on your iPhone, and go to the "Contacts" tab. Here, tap the "+" icon in the top-right corner. From the top, you can add the new contact's first name, last name, and company details. Scroll down and first tap on the "Add Phone" button. This will show a new phone number field. Enter their phone number here. You can now scroll down and add their email address, address, birthday, and notes in a similar fashion. If you want to assign a special ringtone, go to the "Ringtone" section. From here, you can also enable Emergency Bypass to let their calls through even when you have Do Not Disturb enabled. RELATED: How to Let a Contact Bypass iOS' Do Not Disturb Mode Lastly, scroll back to the top. If you want to add a contact photo, tap the "Add Photo" link. From the next screen, you'll see multiple profile photo options. You can use a photo from your camera roll, or you can use a Memoji or an Animoji. Tap the "Photos" button to choose a photo from your Camera Roll. You can browse through all of your photos here. Tap on an image to select it. Now, you can move and scale the photo to fit in the circle. Then tap the "Choose" button. Lastly, you can add a filter to the profile picture. Tap the "Done" button to save the profile picture. You'll be taken back in the profile picture screen. Again, tap the "Done" button in the top-right corner. Now, go through the new contact creation page to make sure everything looks good. Tap the "Done" button to save the contact. You'll now see the contact in the Contacts app on your iPhone. How to Add a Contact from The Call Log Quite often, you want to save the phone number of someone who has just called you. In this case, you won't need to enter the phone number itself. Open the "Phone" app on your iPhone, and go to the "Recents" tab. Here, find the number that you want to save and then tap the "+" button found on the right edge of the screen. Now, tap the "Create New Contact" button. You'll see the familiar "New Contact" screen (from the above section). The difference here is that the phone number is already added. You can now fill in the rest of the details, including a profile photo. Once you're finished, tap the "Done" button to save the contact. How to Find and Call a Contact If you are new to the iPhone, you might be wondering how exactly to find a saved contact. Well, there's the traditional way, and then a couple of quick shortcuts. Open the "Phone" app on your iPhone, and go to the "Contacts" tab. Here, tap the "Search" bar at the top of the screen and search for the contact. Select the contact from the search results to see their detailed information. Now, tap the "Call" button to place a call. Alternatively, you can also use Spotlight Search to quickly find and call a contact. On your iPhone home screen, swipe down on the display to bring up the search bar. Here, simply type the contact name. You'll see their contact page at the top of the list. Tap the "Call" button next to their name to place a call. The fastest way, though, is using Siri. On iPhones with Face ID, press and hold the "Side" button on your smartphone and say "Call (contact name)." On older iPhones with a Touch ID, press and hold the fingerprint sensor to bring up Siri. If you're placing the call for the first time, Siri will ask you which number you want to use. After, Siri will directly place the call for you. Have your contacts saved in Gmail? You can sync and manage contacts from the "Settings" app on your iPhone. RELATED: How to Manage and Delete Contacts On Your iPhone or iPad
