We introduced a dark mode to provide a visual alternative to our existing light theme. To change mode, just go to the device view settings and choose Light or Dark. This version also includes improvements to the actions menu in the file manager, making it easier and easier to access options such as duplicate, move or download a file for offline use. There are a couple of things that ... I ... Need in my daily use of this app on my iPad Pro. Being able to easily draw shapes with set dimensions entered via text entry (assumed to be able to do so), and the ability to draw spline. I must return to my Mac to accomplish these two tasks and it seems that they should be easy to implement on your iPad. Having those two skills would significantly increase my productivity. Another caveat is that I have not been able to select objects recently with Apple 2 pencil - I have to select the object with your finger so I can adjust the nodes / handles with the pencil from there. I still like the program, I'm just thinking that might be a lot more useful with some additions or changes. We are pleased to inform you that our latest version iOS (version 4.4.34) includes the keyboard, which would allow an accurate input. When drawing a line or shape, touch a box of values to access the tool. Concept that this is not a final version of the function, since we are working to improve it. Please help us to improve our app and share your thoughts. Who designed this app must understand that AutoCAD users are not born in 2000. This app seems very basic and is not the interface that most users see on the desktop. Why? When the redesign experienced users have already had a palette from many years ago. It should be more seamless transition from desktop to mobile. One of the main characteristics for which they are at a loss is: Ability to type the dimensions for line lengths and the use of standard key commands. Point and click is such a waste of time. For any experienced user of AutoCAD by typing the commands from memory it is faster drawing of lines. Once composed, you will know how long it takes longer for a long time to make a design. Moreover, it myself, but my pencil Apple does not work either based tutorial on freehand size and changing. None of what is on the paid version. And zero support. Unlucky that you like any other generic design tool and not as the original desktop version, which would think that where would you actually start the design and not starting from zero. I'll try, but it's so slow to draw even a plan floor. I can do it faster on a desktop version. Time is money for AutoCAD users and app developers do not really think that this is not just a hobby app, the app is a working man to make money and every second count when keeping a because AutoCAD is used by professionals, not hobbyists. Thanks for your feedback. We wanted to notify you that the new version of the app, you must select a tool before you start the design with the Apple pencil. We are currently working to improve the support of Apple pencil inside the app. We would appreciate it if you could let us know what features you are looking for when you're working with Apple pencil? What function do you need more? Be aware that this is not a final version of the app, as we are working to improve it. Help us to do better than our app and share your thoughts to feedback@autocadmobile.com Using this app on iPad Pro for the last week and it's so easy to pick up and understand simplified settings AutoCAD! I like how the pencil Apple makes it quick and easy to move from design to the selection and clippings. I wish there were double touch options for the new Apple pencil that allows you to return to the previous tool you are using (such as the space bar on the full version) but maybe it will come with time. This app allows you to do everything that normal AutoCAD allows you to do? No. But, it's a portable option, easy to collect and work.
