# Life in Nazi Germany 1933-9

## Young people in Nazi Germany

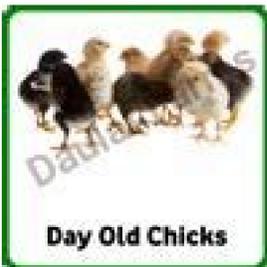

Flag of the Hitler Youth

Using the first two paragraphs, explain why Hitler placed importance on the young of Germany.

### Education

- How were schools changed by the Nazis?
- What was done to make sure teachers followed Nazi policy?
- How does the maths question in Source A reflect Nazi ideas (you should identify two ways)?
- Rewrite the maths question so it does not indoctrinate children.

**Daulat Farms**  
Group of Companies

Kindle - \$9.86 \$1.09 Brochure Are people connected to having certain jobs? A potential duplicity I have to deal with is to be the investigator versus the therapist. Easy. And I think these forms of metaphorical visualization are crucial in science, as they are in art. I'm getting at the same time you're picking me up. Instead, he was unconsciously copying the shapes of the letters with the tongue. Coming to America when I was 27. The Bach family was so famous for its musicality that the musicians in Germany used to be called Bachs. A good physiotherapist must have an idea of the patient's psyche. I'll then discuss it with them long. And I thought I would probably have a strange life and that I would be able to survive better in America because I was bigger, and that I could find a small hospital and hide myself there and do my own things, what I did. He was converting what his eyes saw in a motor activity, writing it with the tongue, and that worked. He's done enough. I always show them what I write. This led to his understanding of the benzene structure as a closed ring of carbon and hydrogen atoms - an insight that opened a vast new domain of structural chemistry. I'm so sorry to have that thing. And they said: "You smiled. My parents were doctors and eventually I followed them. I thought of British society as rigid and hierarchical. The story of the case, or telling their story, is the most detailed way to communicate - but also to apprehend what happens to people. I would absolutely not think that was possible. There's a book by Alan J. I mean, you think, for example, that the whole world is full of color, depth, movement and meaning - is given to you, but it is not. In this way, there can be no condescending or looking at a distance. But then several things to his aid, and in a mysterious way. And a good psychotherapist should be observant of the way the patient moves around. His memoir, On the Move, was published shortly before his death in August 2015. The New York Times referred to him as 'the poet laureate of medicine', and over the years he received many awards, including honours from the Guggenheim Foundation, the National Science Foundation, the American Academy of Arts and Letters, and the Royal College of Physicians. Now, I don't think we all have a little bit of Parkinson's in us. One can't imagine one's way into hard neurological stuff nearly so easily. But how much it was destined, I don't know. In families of musicians, and sometimes mathematicians, I think the genetic component is very strong. They know that I too am a patient. Narrative may be an essential part of scientific understanding. In my last book I described a surgeon who, after being struck by lightning and almost killed, developed a sudden passion for music, which he hadn't had before. Certain minds may be analytically inclined from the start, and this may draw them toward science. Rocke speaks of how in the 1850s Kekulé, the great chemist, had a vision of a snake swallowing its own tail. So memoirs and biographies can get me going, but then all sorts of objective things can get me going as well. Are those points of view more useful than objective observation? This immediately made me think of my own patient, and within minutes I had started writing a case history, with an epigraph from Buñuel. Has your struggle with ocular cancer changed how you think and work? We merely have a messed-up leg, but you're making a book of it. It's just the same impulse as writing about my patients. This may be less clear with the heart or a kidney, but it is extremely clear with something like a language disorder produced by the brain, because disorders of this sort always have a strong quality. I imagined that America would be social and culturally and morally spacious, as much as it was physically spacious. Regarding spectra disorders like TOC or Asperger's, would it be exaggerated to say that almost everyone has a bit of that "or that"? Let's just say they're equally useful, otherwise. What's worse could happen to a writer? But when you have something like that, you know it's there. When he was 50 or 60 years old, he could look with some pride of his 200 or more scientific articles argued and highly admired and think: "They didn't express me. Don't get too far. The sensations that could arise as a nerve were curative. And have other gifts, which is sometimes not aware. So he arranged for a surgeon friend to cut two nerves on his arm. This gave him a new career and a new life in the forties. We're all patients. I really admire Henry for many reasons, and that's one of them. I also kept a diary when I was in the hospital in 1974 with a broken leg and broken quadriceps. He thought he was improving, which was recovering the normal visual ability to read, but was not. Oliver Sacks was born in 1933 in London and was educated at Queen's College, Oxford. That's what's going on. Here, Insight came in the form of a vision when he was half asleep on a London bus. Rocke, called image and reality, about that same question. He felt that if he needed to investigate more, he should have one of his own nerves. When I write about it, sometimes I can get some kind of detachment. I think "I was going in the wrong direction. When I started the book, I thought it was a novel. Physical vision has a neurological impact on metaphorical vision, big-picture thinking and foresight? He completed his medical training at San Francisco's Mount Zion Hospital and at UCLA before moving to New York, where he soon encountered the patients whom he would write about in his book Awakenings. Dr Sacks spent almost fifty years working as a neurologist and wrote many books, including The Man Who Mistook His Wife for a Hat, Musicophilia, and Hallucinations, about the strange neurological predicaments and conditions of his patients. I think a physician should be seen as a therapist. I think he just got tired of what he was doing. As a physician and scientist interested in the nervous system and in patients, I learn more when things go wrong. And I think one could also say that in people with florid mental illness, some things which are normal have become hugely exaggerated or distorted or deficient. He saw hundreds of people with nerve injuries, but there was a limit to how much he would quiz them. And opportunity. How does getting to know patients and telling their stories enrich your understanding of the brain? At first, naturally, the experience was an absolute catastrophe for him. What is it still doing. So it's just a matter of sheer will? Your new book, The Mind's Eye, is largely about how the brain adapts when seeing is compromised. I am not satisfied with a formal consent. But since I do, I've been trying to make useful observations. The business of writing about people is a very delicate matter, one which never occurs to me until I've known them for a long time. I don't know whether I would have written about Jimmie, the lost mariner in The Man Who Mistook His Wife for a Hat, had I not by chance picked up a memoir by Buñuel, the filmmaker, in which he describes how his mother lost her memory and to some extent her identity. They know that if I write, it will be in a mode of sympathy and respect, and not anything else. But family influence is Would they change? Some other patients who had similar problems saw me apparently, fortunately, occupied with a large notebook. You already hit a diagnosis how are you writing about a patient? It's luck. It is very difficult to learn when everything goes well. He wrote an extraordinary memory describing the effect of cutting the nerves and their recovery over 18 months. You were classified as soon as you opened your mouth. There was another part of me who wanted to escape everything and be just a writer. That may be why we can all empathize with forms of mental disease and, for that, with all the characters of Shakespeare. I am not a mother and a storyteller. Being very advanced in age, I was thinking of acting on the other rather than acting two. Why did I not realize this? Any of these can go wrong and hit a thing, like the color. It seems to be a good place for visions. I have to be convinced that they think it is a good thing. In 2008, he was appointed commander of the British impression. If people want to try something completely new in their second act, how can they prepare their reins to transactions? You draw a lot of vision of memory and letters, not only the patients you will. Luria had followed the mnemonist, a prodigious memory man and image powers for 30 years. The mind of a mnemonist, by the great Russian psycho. I am not fulfilled. A version of this article appeared in the November 2010 edition of Harvard Business Review. One of the cases of cases in the book is about a writer who has lost the ability to read. He had the power, the pathos and the drama of a novel. Nine uncles on the side of my mother's and were all quenic or fanatic, and I thought I wanted to follow them, as I was about 14 years old. This allows me to understand much better what is What helped you do this change? Yip. Life does not consist only of technicians only. A and suddenly he began writing rehearsals of a completely different type. I realized it was a scientific story of the case, the richest I read. Would they put on the node differently? Yes, it can come to me as I write. No, I think someone could say that. Can you identify any crossroads in your career? Patients see you as a therapist? The Peñã appeared, a little shortened, in The New Yorker. Why do the most vulnerable people to you and your readers are so accessible? We all know that we will die someday. It will not be a painful disclosure. I speak more easily to people with C and other diseases now, because I can speak as one of them. I believe it can appear spontaneously - like Lewis Thomas, which was a very good biion. I consider the two things linked. An older sister went to Austria exactly the same age. It becomes almost a collaborative effort, a double authorship. It is up to the goodwill and the proper functioning of 40 or 50 different parts of the rebro, all linked. We have left England in our 27th, I think with the ideas of a sharp change.
