Pioneer in Big Data, the risk resized is an innovative financial software provider that unifies large data and analysis technologies in memory to bring investment banks, exchanges and leading financial institutions for scalable, flexible and real-time scalable analysis and risk management. RiskhoScaled Solves The increasing demands for intelligent data processing in the capital market industry by providing a large data and a memory analysis platform that ensures the analysis of historical and live commercial data in real time to help investment firms achieve risk management in real time and compliant Current and future regulatory requirements. The solution not only helps global banks to comply with regulations, but also to analyze historical and live data for business needs, get an improved and challenging vision of their risk position and improve margins. The risk of a real-time and transnational suscaper to Hadoop and HBASE to provide a large integrated data platform designed for the financial industry. à € Bloomberg Open Symbology offers a very important resource to our real-time financial data platform. We firmly believe that open data combined with open source storage and processing solutions such as HBASE/Hadoop is the new way to build cost-effective information systems for the banking industry. This disruptive combined approach solves the issue of data volumes and enables real-time communication within and outside the organization. From this perspective, Bloomberg Open Symbology fills a significant gap and will certainly bring a competitive advantage to its adopters. »Thierry Duchamp, founder of scale risks A heart enlarged or cardiomegaly is not a disease but a symptom of various conditions and isDirecting the underlying problem. Enlargement occurs when the rooms of the heart become dilated or the walls thicken in an abnormal way. A slightly higher heart of the middle can still function normally, but if the cardiomegaly progresses, the heart's ability to pump blood blood More often, doctors discover cardiomegaly through the routine chest x-rays. In its early and moderate phases, an enlarged heart is often asymptomatic, which means that it does not cause obvious symptoms. Once hard for the pump pump the blood, the signs of congestive heart failure usually emerge. These can include: intense cardiac palpitations (episodes of irregular heartbeat that go and go) shortness of breath, especially during the Activetherchest ActiveSchest pain swelling (edema) fatigue or abdominal dimension stretched due to edema or fat accrantes And extremely so severe breathing spells feel similar to an asthma attack and thoracic pain often worsens when accompanied by respiratory difficulties. The common causes of an enlarged heart includes high blood pressure, coronary artery disease (CAD), a previous heart rate, cardiac valve problems and the inheritance of cardiomegaly genes. The CAD can block the blood supply to the heart and promote a cardiac infarction (heart attack). An enlarged heart can also be the result of muscle diseases of the heart (cardiomyopathy), thyroid disorders, pulmonary hypertension, fluid around the heart (pericardial effusion), alcohol abuse, diabetes, HIV or advanced renal disease. Thodonal doctors / getty images diagnostics patients with cardiomyopathy dilation or hypertrophic cardiomyopathy. The first is the most common type and involves the thinning or stretching of one or both ventricles of the heart. Hypertrophic cardiomyopathy, when the left ventricle thickens and enlarges, is often inherited and can be present at birth. The radiographs of the chest and the electrocardiograms are common in the diagnosis of an enlarged heart. A thorax radiograph allows doctors to evaluate the cardio-thoracic relationship to determine if the heart is too much Recording of the organ's electrical activity through the electrocardiogram test detects problems with rhythm and determines whether damage to the heart muscles occurred from "silent" heart attacks. Eocardiograms EocardiogramsSound waves produced by a beating heart and evaluates the condition of the four rooms. In some cases, doctors may also want to make a heart catheterization to get a heart tissue sample to look for signs of infection, inflammation or abnormal cells. This information can help determine the cause of an enlarged heart. Many drugs can treat an enlarged heart, including diuretics to lower water and sodium levels and relieve pressure, anticoagulants to minimize the risk of blood clots, blood pressure and antiarrhythmic drugs to regulate heartbeat. Doctors can prescribe one or more than these, depending on the related complications. Pacemakers and implantable cardioverter defibrillators (ICDS) coordinate the contractions between the right and left ventricles. Patients with serious arrhythmias may need one of these devices to maintain a normal heartbeat. In advanced cases of cardiomegaly, surgical procedures such as cardiac valve or coronary bypass surgery can prevent heart failure. When an enlarged heart does not respond to less-invasive treatments, a heart transplant is a final option. Ivan-Balvan / Getty Images While an enlarged heart is almost always curable, complications may arise if the individual does not take drugs as prescribed or made no essential lifestyle changes to support heart health. Cardiac insufficiency is the most serious complication, followed by blood clots and sudden death. Cardiomegaly facilitates the formation of blood clots in the lining of the heart. If only a clot becomes displaced and enters the bloodstream, it could travel in a vital organ and cause a hit or a heart attack. The heart muroburs can occur if the heart valves do not close correctly; The noise is the sound of blood flowing in the heart. The following factors Raise the risk of cardiomegaly: hypertension, family history of cardiomyopathy, coronary heart disease, congenital heart disease, heart valve disease, heart attack history, viral viral of the heart, alcohol abuse, recurrent heart infections and vitamin deficiencies. TXKING / GETTY Images Although infections and inheritance are uncontrollable, other factors that raise the risk of cardiomegaly can be mitigated and reduced risk. Everyone can benefit from these preventive measures, even if they are more important for people already at high risk. Try to limit salt intake, eat healthy foods, and exercise regularly. Get enough sleep every night to minimize stress, and take prescribed medications as educated. People with hypertension should regularly monitor blood pressure. Cardiomegaly hits the people of all ages, even if it is more common in elderly men and women. Cardiomegalia generally stabilizes and can also improve diagnosis and treatment. People with enlarged hearts should report any unusual or deteriorate symptoms to their doctor as soon as they grow. The questions govern our life more than we would like to admit. Indira Gandhi said better: à € The power to interrogate is the basis of all human advancesà €. BigStock cannot be a better example to illustrate the direct relationship between questions and human progress than during the spacecraft between Russia and the United States. In 1962, John F Kennedy gave his famous speech à € –noi choose to go to the moonà € ~” and only 2.503 days after Neil Armstrong and the pilot Buzz Aldrin took over the moon. It was a small step for man, but a giant leap for humanity. The whole world celebrated the landing of the Moon. Here we are Of a new dawn of human success and the possibilities that preceded us. Yet, despite all the innovation that had occurred following the Space Race, there were much more waiting in the wings. One of these innovations was the wheelchair. Related: Video: The Mindset you have to climb from R100 000 to R1 Millions Just like that, we put a man on the moon 13 years before putting wheels on the luggage. Why? Because the world's best minds were focused on putting a man on the moon, not making the normal journey a little easier. Ask for better questions This same principle is true for you, because as an entrepreneur in any day, you can create any number of possible futures for your business and for yourself. And so, the question becomes how you create the future you really want? Well, the simple way is to ask better questions, because if you do not ask the right questions, you will never get the right answers. You will always behave with less favorable information. And with less favorable information, inevitably make decisions less that is okay. And decisions are your supreme power. If you choose to scale or not, your decisions today will always predict the results of tomorrow. Related: How Osidon went from Start-up to Scale-up in 2 years So, what kind of questions should you ask? Start by asking: What do I want? Do you want to make the human race a multi-planetary species and colonize Mars like Elon Musk? You want to prove to your father that you can build a company bigger than I can? Want to build a bigger business than your ex-wife's new partner? Do you want to live a simple life in its isolation, made possible by an online information company that makes \$50 000 a month? Find your internal values Then, ask why? For example, if you want to build a billion dollar business, then ask yourself why? It can be because you want people to admire your successes or perhaps your risk radar is broken and you will do anything just to see if you can pull out. In its essence, yesTo understand what motivates you as a human being. The world leader expert in the sector sector Psyche, Tony Robbins suggests that there are six needs that guide us as humans. These are divided by the four needs of the personality and two needs of the soul. The needs of the personality: certainty - the desire to know what happened. uncernty à € à ~ "desire and appetite for risk. Love à € à ~" The desire to connect with people. Type à € à ~ "The desire to be seen and admired by others. High: à € 5 lessons to take your start-up to climb the needs of the soul: growth à € à ~" The desire to grow and improve. Contribution à € à ~"The desire to return. Most of us motivated by one or two of the above most of the others. If you were to select two of the six of them, what would they be? How can you see these Needs expressed in your behaviors and, above all, in the things you want for you and your business? The thing of your motivations and goals you set for you is that they will change over time. When I was in my twenty years, when Someone asked me what I wanted out of life, my need for a meaning would be kicked and I would say: "I want to be the owner of a billion dollar business. When I asked this question today, the answer is all about the contribution. Most entrepreneurs go through this same transformation. My good friend Rich Mulholland, who is one of the best speakers in South Africa (if not the world) The best speakers, says it better: à € à ~ "When I was 20, I wanted to be a billionaire. When I was 30 Years, I realized that I was probably never been one and at the age of 40 I stopped giving a cock. "Related:" Do you have that deal 1 in 100 able to scale and land an investor? He is committed to building a big new departure that intends to climb around the world, but his because he has changed. The biggest entrepreneurs are motivated à €
